RE: 2012 LNG Export Study

To Whom it May Concern:

There is no doubt that hydraulic fracturing poses serious risks to people, communities and our environment. If you feel that continued use of this process for extracting a fossil fuel is necessary for our own economy, that is one thing. But we should not be increasing the dangers at home by exporting such gas to the rest of the world. By opening access to vast foreign markets, permitting fracked gas exports will certainly and dramatically fuel an increase the scale of fracking in the United States. It will decrease incentives elsewhere in the world to enhance efficiency and shift to renewables. All of this will significantly increase climate change. Instead, now is the time to limit the expansion of fossil fuel use and polluting, health-threatening gas fracking here at home. Please deny all applications to export natural gas. Thank you.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Eric Schleicher

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Exporting fracked gas which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it produces 20%-30% more CO2 than burning gas in the U.S. Furthermore, exporting fracked gas would increase domestic prices, giving utility companies an incentive to use coal-fired power plants which are beginning to be phased out, largely due to the low price of natural gas and increasing U.S. carbon emissions overall. Green-lighting fracked gas export terminals would have a disproportionate impact on communities near fracking operations. People living near fracking operations cope with terrifying local impacts: contaminated even flammable drinking water, cancer-causing air pollution, massive open pits full of toxic wastewater, huge fleets of diesel trucks, chemical spills, and pipeline explosions. Some residents have even found fracking chemicals and heavy metals in their blood. In short, the human toll taken by fracking is already far too high. Giving the fracking industry an incentive to expand its operations by allowing it to export fracked gas overseas is nothing short of irresponsible.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kirsten Edwards

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Joe Streno

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Exporting gas may make more money for the fracking companies, but it not safe for the people who live in the communities where fracking is taking place. Until there is a safe way to extract the gas and oil, fracking should be STOPPED, much less be accelerated to accommodate exporting gas. Doesn't anybody, anywhere care about the people who are being impacted by the greed of these big companies?????

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anelise smith

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Cheryle Ramirez
905 Main St Ste 615
Klamath Falls, OR 97601

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a risky practice for American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Because of the high risk fracking has on the environment, I request that you keep fuel resources in the country and not allow the export of fracked gas. Plus this will ensure that our deposits of natural gas will not be depleted, allowing the US to become more energy independent if those deposits are ever needed. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Frank Cannon
Po Box 14581

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

I oppose fracking for domestic use and export. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jerry Melton

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anthony Padden

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I believe climate change is real and that we are already in a deep environmental crisis. At some point, our insistence on destroying the world we were given to live on will no longer be able to sustain us if we continue this destruction. The United States has a responsibility to its citizens and to the world not to take us willfully over a tipping point that we are nearing. Fracking must end. Choosing not to export fracked gas would be a start.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tara Becker

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mauryon Gambill

RE: 2012 LNG Export Study

To Whom it May Concern:

I live in Syracuse. Fracking has enough risk that our water source, Skaneateles Lake, and its watershed, are protected already protected. I know that as a nation we need to WAIT on extracting this gas until a safer alternative comes into play. The reserves will only increase in value. We ABSOLUTELY CANNOT destroy our nation's land using this technique. And further, WE ABSOLUTELY CANNOT allow companies to MAKE A PROFIT on gas either domestically or abroad WHEN THOSE PROFITS COME AT THE COST OF THE LIVES AND WELL BEINGS OF HUGE NUMBERS OF CITIZENS!!

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. It causes contaminated even flammable drinking water, cancer-causing air pollution and smog, massive open pits full of toxic wastewater, huge fleets of diesel trucks, chemical spills, and pipeline explosions. Some residents have even found fracking chemicals and heavy metals in their blood. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets while ruining our land, water, and add to more climate changes and resulting worse weather and more deadly storms!!!. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gloria Kislin

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rick Wigington

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ann Johnson

To Whom it May Concern:

I know you think this is the answer to bridge our way to renewables, but it is not.. you are taking a very permanent impact material to solve a temporary problem, see how wrong thinking this is? No matter matter how much power, trading power, jobs, the frackers whisper in your ear, it is you they will blame in the history books for being responsible for the most numerous future Superfund Brownfields you are allowing to be created. Yes, are are making a deal with the devil. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lynn Deuschle

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Belinda Scott

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Angela Wills

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mike Loughry

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We have the destruction of our land, excessive traffic, polluted ground, air and water. Then we don’t even get to use the gas. It is sent to other countries. If we are to become energy independent, we need to use our own resources here in the US. Please expand the use of solar panels, and give solar credits a decent amount of payback for individuals who install panels.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It’s time we found out what’s in "Fracking Fluid". Could it possibly be industrial waste so toxic that dumping even a tiny bit of it into the environment is a crime? To Hell with Cheney’s "Halliburton Exception"! It’s bad law and needs to be repealed or overridden! We demand to know what they are pumping into our aquifers. Please bear in mind that those who roll over and allow the greedy energy profiteers to poison our land, air and water WILL be held responsible at the polls, and probably in civil court actions. Don’t take their (or their lobbyists’) word for it. Excercise due diligence and find out the facts.

Sincerely,

Edward Engelhardt

RE: 2012 LNG Export Study  
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Keep our energy resources in the country. Our citizen should have to pay the price for corporate greed.

Sincerely,

Susan Coble

To Whom it May Concern:

To date the reports of contamination are few, many toxic effects of a particular practice or substance are not known for many years. I don't think we should take chances with ground water (an incredibly important and soon to be scarce resource) for our own use. We should not, nay cannot take chances to facilitate exportation. Steven J Fogarty M.D.

RE: 2012 LNG Export Study

To Whom it May Concern:

Dear President Obama, Is this the legacy you want to leave behind when these next four years are up? This would be a legacy of the beginning of the destruction of the planet, on your watch. Nothing else that you will do in these eight years will mark your record as black as this one will. Is this what you want to will to your children and your grand children? Please, please think about the ramifications of what you are doing. Worst of all, you are telling “Big Oil” that you approve of what they are doing, so just go ahead with the destruction of our landscape, water and plants, and, in fact, we will keep on paying you to do it. I guess Wall Street is still tugging at your coat sleeve to be their advocate as you were in the housing debacle. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Cynthia Perotti

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Richard Sanderell

RE: 2012 LNG Export Study
To Whom it May Concern:

I live in Ohio and the fracking controversy affects my state. I think many Americans are not aware of the documented health and environmental risks of fracking. You have been a friend to the environment but this is a clear and present danger, with irrevocable consequences. Would you want water coming out of your tap that you could light on fire due to the methane in the water? Please deny all applications to export natural gas.

Sincerely,

Denise Deitemeyer

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We still don’t have answers to questions about what impact fracking has on the stability of tectonic plates and already existing fractures and fault lines in the sub-strata of the planet. Wait!

Sincerely,

Roberta Wray, J.D.

RE: 2012 LNG Export Study

To Whom it May Concern:

Subject: Permit Requests for Exporting Liquified Natural Gas from 19 Terminals that are Currently Used for Import Only

To Whom it May Concern in the DOE, I am strongly asking you to stop the proceedings that would permit the exporting of liquified natural gas from 19 terminals that are currently being used for import only. The study conducted was not a comprehensive study and omitted the cumulative health impacts of exposure to the hazardous vapors from not only the fracking process but also the processing of these extractive gases that are harmful to the environment, peoples health, peoples water supplies (both public and private) and air contamination. Unfortunately, the study's scope only focused on the economic benefits to the U.S. economy, the U.S. trade balance, the industry and the natural gas leaseholders. Aquifers are not replaceable. Contaminated rivers that supply public drinking water, slowly and then more rapidly affect public health and put more strain on the health care systems. If this industry could be truly believed that this gas would make us energy independent, then why are they now asking to export this gas to other countries. There is something really afoul here and it must be addressed by not allowing the permitting of the exporting of this natural gas to other countries.

Sincerely,

Michele Bertini

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lissa rice

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is an extreme environmentally-destructive process, that undermines the ecosystem everywhere your enablement would insinuate fracking's toxic threat, under the principal of stewardship common law demands you as the nation's gatekeeper of this request, first protect American safe water supplies, our communities, and the climate. Allowing fracked gas exports would exponentially and irrevocably contaminate our collective environment's natural water content, that clearly violates the Clean Water Act when thoroughly scrutinizing the overwhelmingly-toxic chemistry mixed into our natural water supply in multi-cubic-volumes this industry's incalculably-toxic cocktail has been obscured the toxicity to cover up, which by your allowing without knowing just how systemically this damage will be filtered, as if that were even possible, dramatically expedites perhaps the most irresponsible, unjustified compromise to this country's natural circulatory system to life (required by all life in that wake) toward untold ruinous half-life, that fracking would impose-by-necessity (of process) to release/extract natural gas. Your allowances cannot be justified for the profound harm industry insistence has no claim on, or justification to promote doing their bidding. To so unequivocally contaminate massively the regions this kind of authorization represents, would be a reprehensible violation to undermine this nation's natural resource: water. And signing off on it, is to write off any moral or legal authority, further to represent anything approaching leadership of our Nation's best interests. Giving the fossil fuel industry access to huge foreign markets is not a national security priority, let alone responsible governmental policy that respects life as we know it; it is a capitulation to unfounded, corrupt political influence you must reject. Stand up for our Nation's underlying health, and reject this misguided, destructive fossil fuel industry, and deny all applications to export natural gas.

Sincerely,

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ed canady

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. It destroys valuable natural resources necessary for our survival. Regulations will never protect our water since it is fluid and seeks its own level. Eventually all would be contaminated by the numerous harmful chemicals that are employed in the fracking process. We cannot take a destructive risk like this. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This would put our health and families health at risk and have a dangerous impact on our environment.

I know this is a freedom of financial gain type of argument the Fossil Fuel industry will cry bloody murder and try ever trick and bribe in the book to keep on going! However for the sake of the RENEWABLE ENERGY FUTURE WE MUST MUST, MUST HAVE FOR HUMANITY AND FOR THE BIOSPHER WHICH WE LIVE ON WE MUST MUST MUST STOP ALL FOSSIL FUEL USE AND MOVE ON TO HYDROGEN FUEL CELLS POWERED BY SOLAR AND GEOTHERMAL, ... ALL RENEWABLES NOW NOW NOW NOT LATER. SO GET YOUR ACT READY TO PUT THE FOSSIL FUEL INDUSTRY DOWN BY STOPPING ALL SUBSIDIES AND SUPPORT AND SUBSIDIZING AND SUPPORTING ALL RE NOW .. THANK YOU FOR REPRESENTING THE PEOPLE AND THE PLANET AND NOT THE DINOSAUR INDUSTRIES POLLUTING OUR WORLD!! THX !!! Fracking is a toxic threat to American communities and the climate. RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sylvie Horvath
1035 Columbine Road
Asheville, NC 28803

RE: 2012 LNG Export Study

To Whom it May Concern:

As a registered nurse with a specialization in pediatrics, I am concerned about the lack of a rigorous scientific review of the possible health impacts of hydraulic fracturing. Early evidence suggests endocrine disrupting compounds are present in the proprietary fluid formulation used in fracking. Gag orders prevent physicians from divulging findings and doing research on possible health impacts. Diesel exhaust and noise in proximity to schools and residential areas may exacerbate asthma and upper respiratory disorders. I urge you to remove the exemption the oil and gas companies enjoy from the clean water and air acts. The burden of proof should be on industry to demonstrate that fracking is safe. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Alicia BARBA
932 Lawrence Avenue
Girard, OH 44420

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Steven Falk

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kathleen Mezoff
508 Cabezon Court

RE: 2012 LNG Export Study
To Whom it May Concern:

Recent research even suggests that methane emissions from fracked natural gas operations are so high that fracking may be worse for the climate than coal (2). Exporting fracked gas – which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it – produces 20%-30% more CO2 than burning gas in the U.S (3). Furthermore, exporting fracked gas would increase domestic prices, giving utility companies an incentive to use coal-fired power plants - which are beginning to be phased out, largely due to the low price of natural gas - and increasing U.S. carbon emissions overall (4). Bottom line: No matter how you do the math, a world that runs on natural gas is a world wracked by climate chaos and extreme weather – deadly superstorms, wildfires, droughts, and floods (5). We need to move away from fossil fuels, not make massive investments in new infrastructure that will lock us into dirty fracked gas for years to come. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Please show some positive leadership - stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sarah Dwyer

RE: 2012 LNG Export Study

To Whom it May Concern:

Exporting fracked gas – which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it – produces 20%-30% more CO2 than burning gas in the U.S. Furthermore, exporting fracked gas would increase domestic prices, giving utility companies an incentive to use coal-fired power plants - which are beginning to be phased out, largely due to the low price of natural gas - and increasing U.S. carbon emissions overall. Fracking is a toxic threat to American communities and the climate. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michael Schmitz

RE: 2012 LNG Export Study

To Whom it May Concern:

Dear President Obama, Please oppose the growth of gas fracking in the US as it poses a great danger to groundwater as well as to the atmosphere. The US should be moving toward renewable sources with all of our scientific and industrial power. To continue down a path of reliance on fossil fuels, whether in the form of oil or natural gas, is a shortsighted approach that ensures our children and grandchildren a future of environmental and political instability. Please follow the lead of our German friends and make this the time that the US embraces an energy future that relies on future technologies... wind and solar power are in their infancy and need your support to become THE energy sources of the future. "All of the above" is a terrible motto for our energy policy. "Renewables" should be the clarion call. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dean Kolts

RE: 2012 LNG Export Study

To Whom it May Concern:

All current and future generations depend upon a healthy natural environment for our water, air, and food. None of us can live healthy lives without these resources. So protecting the quality of our shared Earth environment should be the number one priority of government. Fracking poses a toxic threat to our water supplies and air, as well as adding to the existing serious problem of climate change. We can not afford to destroy our environment just so that fracked gas can be exported to other countries. Allowing exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. If we really are so desperate for additional natural gas energy that we have to resort to fracking, then at the very least the natural gas produced should be used to meet America’s energy needs—not exported to run foreign factories. Please stand up to the fossil fuel industry and other multinational corporate interests and deny all applications to export natural gas.

Sincerely,

Susan Quinlan
6501 Jack Pine Dr
Bellvue, CO 80512
To Whom it May Concern:

Why in God’s name would we subject ourselves to the toxic threat of fracking just to export the end product to foreign markets? That’s like offering to transplant your own heart, or your child’s heart, into a stranger. If we have a surplus of natural gas, let’s just stop fracking, and insist that any new energy ventures by new or existing interests be limited to renewables.

Sincerely,

Judith Davidsen

As a resident of Bradford County, PA, I am upset at the idea of importing fracked gas. I thought the whole idea of getting natural gas in the U.S. was to support our country and make sure we would have supplies for as long as the gas would be available. This will increase the cost to Americans as well as creating another threat to our health. In our area this is creating huge problems with our air quality from evaporation pools releasing toxins into the air as well as chance of earthquakes from fracking and pollution of our water with toxic chemicals from the process. In addition truck traffic in our rural areas is creating diesel gas pollution, destruction of our road surfaces, as well as destroying the water and sewer lines underneath the roadways in our communities. Please reject the applications from the fossil fuel industries to export natural gas.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Llus Martn

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Joseph Bush

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bill Erickson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

William Gaieck

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Savanah Tavares

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Sincerely, Lara DeLuz 9646 Lake Natoma Road Orangevale, CA 85662

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Apland

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Do not allow permits for the export of Liquid Natural Gas from the 10 terminals that are currently for import only. The argument for economic development does not bode true against the negative and long term toxins that are already showing their impact on humans, live stock and lost of habitable land and drinking water because of the lack of monitoring already in the industry. Much more scientific study not connected to the industry needs to be considered. Tighter regulations of the industry also needs to be done. Everyday, medical research is pointing to the impact of chemicals that are affecting the health of children and adults as our environment becomes over saturated with new untested chemicals. More restraint is needed before rushing ahead without considering long term consequences.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lisa Fletcher
716 32nd Ave. N.
St. Petersburg, FL 33704

RE: 2012 LNG Export Study

To Whom it May Concern:

Please don’t allow the export of our natural gas. If we export it, our own prices will rise, making it unlikely we can convert many transportation applications to that fuel source. As an Oregon resident, I am dismayed that FERC is allowing big business to trump property ownership just so that the fat cats can get fatter. Please say "NO!!" to natural gas exporting. Thank you

Sincerely,

Ed Parker

RE: 2012 LNG Export Study  
To Whom it May Concern:  

I understand how appealing it is to find freedom from dependence from Arab oil. However, fracking is a colossal mistake. The infrastructure should never have been laid in the first place. The fracking process now poses a great opportunity to make the proactive choice of restraint from man's ability to impact his host planet, our planet earth. Fracking is like wringing a sponge dry. The side effects of this process on a very, very fragile planet will be disastrous to our survival. Please do not export fracked oil. Please put the public good over politics and make the decision to ban fracking. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Larry west

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

S. David Aardappel

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Szalasny
344 Teakwood Terrace
Williamsville, NY 14221
U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Even if someday we learn how to do this kind of resource extraction safely, we’ll need the energy here in America _then_, not overseas _now_. Right now, quite independent of the potential for long-term environmental damage due to fracking, every new source of natural gas is a net loss to our economy due to the accumulating effects of climate change. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dave Greene

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Joshua Sherrill

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jennifer Frieder

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Brian skinner
1876 N 10th St
Washougal, WA 98671

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lauren McLeod

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gayanne Robinson

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please stop this destructive practice Mr. President. Here in the Pacific NW there was an article this morning about how radioactive waste from the closed nuclear power plant at Hanford, WA is leaking into the ground water from the aging holding tanks and that the new waste treatment plant is froth with technical challenges and cost over runs and now that leakage will end up in the Columbia River. Why do we continue to do things that are ultimately destructive to our future generations? Don't do it Mr. President...your daughters, my daughters (25) and son (28) will be the ones who suffer from this. Larry Doty 1707 NW Doty Lane McMinnville, Oregon 97128

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Just as important is the amount of energy (likely fossil fuels) that will be needed to convert the gas to a liquid form! Some research shows as much as 2/3 of the energy that would be supplied by natural gas will be used in the conversion process. Ridiculous! I suppose this will also be subsidized by the taxpayer as usual...

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. No one can tell how rock will fracture. Shale is impermeable to the flow of gas - that is why it must be fractured to produce the gas it contains. When material is injected to fracture shale, it sometimes fractures the overlying rock. This allows injected chemicals and gas to escape and contaminate drinking water. What will we drink when the fossil fuel industry has extracted their profits and left polluted drinking water? The water cannot be cleaned!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Denise Comiskey

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I would like to inform you that there is a new breakthrough technology for harnessing limitless geothermal energy. No Fracking needed. It uses completely closed loop system. Zero pollution. It doesn't need hydrothermal reservoir although not limited to hot rocks. It doesn't depend on sunny or windy days produces electricity 24/7. It can completely replace uranium, oil, and coal as energy sources. For more information please visit www.GeothermalWorldwide.com. In light of this information it would be irresponsible to encourage and continue using fracking, coal, oil and uranium as energy sources for production of electricity. RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is not in the long-term interest of this country. Exporting the products will lead to even more fracking. Fracking affects aquifers bearing water, a critical resource for life. It is a short term benefit and long term cost. Please consider those costs in your analysis.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Elizabeth Shiverdecker
104 N Central Ave
New Albany, MS 38652

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Fracking has been the cause of a man-made earthquake in Texas and water faucets that discharge flammable gas in Appalachia. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. As fossil fuels are nonrenewable resources, exporting fracked gas not only makes America's energy future more unreliable, but also continues us on a path of utilizing nonrenewable resources, which we need to transition out of, now. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anthony Coleman

RE: 2012 LNG Export Study

To Whom it May Concern:

Exporting our natural resources may help private industries in the short run but will surely hurt our people and our economy in the long run. 50 years from now, when your daughters are in their 60's, the gas that is there now will be far more precious to us than we can imagine. Perhaps by then someone will figure out a way to harvest it without trashing the environment or the way of life for our rural communities. Right now, fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. This will grow fossil fuel dependent economies of other countries and increase costs to our people and industries. It will result in an increase in the release of methane into the environment - increasing the costs to government, not industry, for the climate havoc that results. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Laura Malloy

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Barbara Snider
Ocean Park, WA 98640

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Someday some one is going to have to stand up and say "alright already"; the world has finite resources and infinite people wanting to develop our energy. I saw so much greed while working for the BLM. In 1969 I already was working for organizations to limit fossil fuels and fossil water use!! AND we were studying "desertification" of many areas of the globe, These energy and climate "problems" are NOT NEW. We have to stand up and pay attention and listen--"there is no such thing as a free lunch in nature!!" Stop this exploitation of our natural world for greed. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Pamela Porter

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Christina Rice

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gregory Shelley

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. And it will continue the dependence on carbon-based fuels, when we desperately need to reduce such use to stem global warming that is reaching disaster level. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Marjorie Boyer

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Donna Redisch

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kenneth Green

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking BAD: for safe drinking water (it contaminates frequently), for global warming (the gas supply chain, especially using fracking, contributes to global warming gases more than usage of coal for energy needs), for property values (landowners who sign mineral rights lease to gas drillers also sign away the ability to easily sell their property while drillers have rights to use the land). Opening up the export markets around the world to the gas underneath our countryside lands will exponentially raise the demand to frack our land and destroy our water, and will skyrocket the price of gas as demand increases. This is not a scenario that Americans need for the next generation or two. PLEASE do not support export of our natural gas extraction.

Sincerely,

Greg Pace

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Patti Weizel

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It’s time to stop importing oil and use our own oil for ourselves.

Sincerely,

Tom Monaco

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kristofer Schell

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Don’t do the easy thing - do the right thing - there is too much evidence that fracking is harmful to our community at large - Remember Rachel Carson - years ago about DDT -well she was right - and we cannot make mistakes like this again and again leading to a toxic and very unsafe planet - we wonder why cancer is so very prevalent and we keep rolling the dice!!!

Sincerely,

Gale Patrick

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Da Mack

To Whom it May Concern:

As I read more and more studies and articles, it is clear that: 1) fracked natural gas (and fracked oil) industry is not being charged for environmental costs like contaminated air, water and soil nor for the fresh water they take from all the people and 2) the myth that NG makes the U.S. energy independent for 100 years is now being 'bait & switched' for the myth that it will restore our economy by reducing unemployment and export imbalances and 3) the myth that fracking and the liquefaction of natural gas is safe. As a medical doctor, I remind you that many organics are carcinogens and neurotoxins. I remind you that we poorly understand the neurotoxicity of industrial waste and should learn more before we harm the people. We need an energy policy for the long term, not a profit margin for a few for the short term. Please put on your thinking cap and make moral, long term decisions and recommendations. Please reject applications for exporting our natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Dear Mr. President, There are better ways to utilize and plan energy pursuits. Now is the time to move toward non-toxic forms of energy and better plan utilization and practical procurement of traditional energy sources. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Any new energy, present energy pursuits and maintenance must be owned, led and overseen by government and any revenues should be seen going into the federal and state budgets. Any companies evolved in energy of any kind should be nothing more than private contractors. NEVER PRIVATIZE ENERGY SOURCES. Sincerely, Beverly Parris 202-31 45 Road Bayside, NY 11361

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Steven cassard

RE: 2012 LNG Export Study
To Whom it May Concern:

Although there’s been reports to downplay the impact of fracking in order to allow the export of fracked gas, it is a very potent greenhouse gas that leaks from natural gas wells, pipelines and might even be worse than using coal!! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. I am asking that you would please take a stand for our environment and don’t allow consumerism to destroy our nation. PLEASE stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jen Simmons

RE: 2012 LNG Export Study

To Whom it May Concern:

Neither the US or other countries should be using more fossil fuels - all should be refocusing on renewables and sustainable solar, wind, and other possibly new forms of energy sources. Why are we - the US - giving subsidies to fossil fuel companies and not doing research and supporting non-carbon energy? This is economically foolish and short sighted. We can and must do better. Exporting gas hurts our home communities and industries. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. This will hurt what is left of American industry while helping foreign manufacturing get ahead of our domestic manufactures. Why do this? I want you to Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

B. Arrindell
