U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carey Butlien
8915 89 Street
Woodhaven, NY 11421

RE: 2012 LNG Export Study  
To Whom it May Concern:

Because of the failure to conduct independent scientific studies at drill sites to determine impact, industry's claim of no harm to human and environmental health cannot be substantiated. Ignorant, arrogant and unscrupulous industrial promoters know it may take decades of time for toxic chemicals to migrate through cracks and crevices caused by natural forces. Because of the secrecy of the energy talks and the undoing of legislation to protect human and environmental health, government must take immediate action to halt the Marcellus Shale Industrial Complex and protect citizens from these known predators. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ann Short

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Andy Berkvist

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracked gas is methane, which is four times more potent as a greenhouse gas as carbon dioxide. The fracking process inevitably leads to methane leakage; thus fracking may contribute more to global warming than burning coal. This is in addition to concerns about contamination of groundwater by toxic chemicals used in fracking and other environmental concerns about fracking. As bad as domestic development of fracking is, exporting it would be even worse, because the gas must be compressed, at great energetic cost. Exporting it would also affect global fossil fuel markets in ways that would disincentivize development of green energy alternatives. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dorothy Olson

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Instead support studies of chemicals and substances used in fracking and the pollution impact of their usage. Permit patenting of the "secret" formulations used by them, but analyze them and make them public. Also, look at the enormous quantities of water used in these procedures and the impact on water supplies and quality needed for human, wildlife, botanical and other environmental uses. This is necessary to determine the safety of fracking in our country.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jacqui Franklin

RE: 2012 LNG Export Study

To Whom it May Concern:

I have watched what fracking is doing first-hand in the small towns of northern WV where I grew up. City wells have been compromised and the huge gas trucks roar down country roads and small city streets, tearing up pavement, causing accidents, and breaking windshields. The quality of life in towns where fracking occurs declines immediately. Out-of-state workers arrive and campers go up in every vacant square foot, causing sewage issues and bringing a rough, wild west feel to once sleepy little communities. Farmers cannot grow food since the huge gas operations leave toxic residue in the air and soil. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

1. Fracking is already destroying the water in areas where it is already permitted. 2. The oil resulting from fracking will not benefit the US because it will be shipped to foreign markets. 3. The pipe lines delivering oil to Texas will only contribute more wealth to the Koch brothers who operate the refineries that will process the dirty tar sands into oil.

MR. PRESIDENT.....DO NOT ALLOW ANY MORE PERMITS FOR FRACKING. SINCERELY, SHEILA COOK PORTLAND OREGON Fracking is a toxic threat to American communities and the climate. RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Linda Grace Frost
555 Ferdinand Ave
Half Moon Bay, CA 94019

RE: 2012 LNG Export Study

To Whom it May Concern:

I am a registered voter living in Pennsylvania. We have an environmental agency that is more interested in politics than in protecting the public. We do not need more fracking in PA, but more environmental oversight of the fracking that is being done. Other states such as MD and WV are proceeding cautiously and trying to protect the environment. In PA we have given free passes to the oil and gas companies to do anything they please. For this reason I oppose the permitting of 16 new facilities to export gas. In addition, these plants will create new pollution (yes gas plants and storage/distribution do cause pollution). And lastly, we should be keeping our own gas and not exporting it to other countries.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Diana Otto

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Domestic use, as was used in the PR campaign, like jobs, was seen at the time by many in the environmental community for what it was propaganda. I'm in the middle of it. Jobs, a joke: everything is subcontracted to sometimes local businesses, but the wages paid are better than nothing, but barely above existence, lest one work 60 or more hours per week. Now retired, I was a construction superintendent for a company that did mostly municipal water, wastewater, and drainage work. As such, truck-drivers were paid the posted rate of over $30 to over $40 per hour, depending on local union agreements, yielding a middle class living, paid for by municipal governments (taxpayers). Contrast this with the local contractor that can't pay truck drivers (with enhanced certifications) more than $15 per hour if he wants to get work from the gas industry, a subsidized and highly profitable entity. Taxpayers can pay $40 per hour for a truck driver for work on improvements to the commons, but taxpayer subsidized corporate behemoths, realizing huge potential profits, can pay less than half for labor. Economic justice? Surely, some people are working that were unemployed before, but is it real justice? And to export on top of the level of economic, environmental, and social injustices is unforgivable. Domestic energy production should be geared to domestic requirements. The longer we hold onto our reserves, the longer the US is energy secure; it's like money in the bank. Accelerating the environmentally destructive processes for export is short-sighted and just plain stupid.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ernest Chanes

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracked gas, i.e. methane gas, is no more "natural" than the toxic agents and deleterious gases which assault those who are forced to breathe the contaminated air in the vicinity of all "fracking" sites! Producing LNG is, by its very nature, a losing proposition for our environment and for climate change!

RE: 2012 LNG Export Study

To Whom it May Concern:

Hydraulic fracturing of natural gas is a toxic threat to American communities and the climate. This extreme extractive energy process is not a bridge fuel to renewable energy nor protective of our changing climate. There are many negative environmental, ecological, and occupational health impacts from fracking. Some of these include:

- the total carbon footprint from fracking is greater than coal,
- well casings are known to leak over time and release methane gas into the atmosphere,
- increased truck traffic and placement of compressor stations greatly increases both air and noise pollution in local communities,
- improper storage and use of silica without appropriate dust suppression and engineering controls results in releases of toxic silica in residential communities, and worker exposure in excess of OSHA PELs.
- Production (brine) water from the fracking process contains high levels of radioactive materials,
- Elevated levels of radon in natural gas from the Barnett and Marcellus Shale are being piped into residential gas stoves and exposing residents to levels of radon in indoor air that far exceed EPA’s recommended exposure limit of 4 picocuries/liter. This will be our next public health crisis.

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jill Greenberg

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Janet Leshner

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jeff brown

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jamie Metzler
1435 Boyle St
Baltimore, MD 21230

RE: 2012 LNG Export Study

To Whom it May Concern:

I was under the impression that the whole reason to expand our own energy production was so that we would STOP IMPORTING, not so that we would EXPORT one product and KEEP IMPORTING others. If you are not intending to ACTUALLY reduce our dependence on overseas energy imports, please come clean with that - since that’s about the only thing that could possibly remain clean after all the environmental damage done by the fracking process.

Sincerely,

Katie Simpson

HOW WILL EXPORTING FRACKED GAS HELP AMERICA ATTAIN THE STATED GOAL OF "ENERGY INDEPENDENCE"? Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kiwibob Glanzman

RE: 2012 LNG Export Study

To Whom it May Concern:

I think the situation is: balance short term increase in fuel and jobs with long term increase in global warming and pollution. It could be framed as don’t ask what the planet can do for you, ask what you can do for your planet. We use planetary resources for all our perks some of which make our lives easier and some of which threaten the planet, ergo our health and quality of life. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

I cannot imagine how EXPORTING natural gas could be considered in the national interest. While we are moving towards a clean energy future, we still need some natural gas in the US. But to export it seems completely against our interests. especially if the extraction of the gas, using fracking, leaves behind a toll of polluted water and dangerous rock slides. The citizens of this country need to come first,

Sincerely,

Lesley Rigg

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Leslie Weise

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We need to be focusing on CLEAN GREEN energy solutions. There is no second chance on our environment. It is irresponsible to the next generation to continue what we already know is a "Doomsday" scenario of increasing fossil fuel usage, not to mention the environmental impact potential of toxic nature of this fuel extraction process. We need to be DECREASING fossil fuel usage. Fracking is no solution - it is further damage.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It is hard to understand why our government is so willing to allow destructive mining of our country to provide yet more revenue to corporations dedicated solely to their own enrichment.

Sincerely,

Anne MacLeod
1224 Washington Drive
Annapolis, MD 21403
U.S. Department of Energy

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Maryellen Cahill
22-11 47th Street, 2nd Fl

RE: 2012 LNG Export Study  
To Whom it May Concern:  

Why do you think it is acceptable for companies and the individuals running them to assert their property rights (oil removal) by destroying the property rights of others (everyone else in the community who have to breathe and drink the result of the oil owner's actions and those of us footing the bill for skyrocketing national health costs)? Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study
To Whom it May Concern:

As a nation, our inexcusable inaction on climate change is a devastating failure of leadership. It is hard to understand how the DOE can downplay the negative and long-lasting impacts that fracking presents. Methane emissions from fracking are so high that it may be even worse for the climate than coal. In addition to posing a toxic threat to American communities and the climate, allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States, by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Merri Gelbard

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Paul Anderson
12 Ann Ct. Apt.208
Paramus, NJ 07652

Eugene, OR 97402
Fracking is a toxic threat to American communities and the climate. Green-lighting fracked gas export terminals would have a disproportionate impact on communities near fracking operations. People living near fracking operations cope with terrifying local impacts: contaminated—even flammable—drinking water, cancer-causing air pollution, massive open pits full of toxic wastewater, huge fleets of diesel trucks, chemical spills, and pipeline explosions. Some residents have even found fracking chemicals and heavy metals in their blood. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Paul Snyder

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please do not overlook the many hazards of obtaining energy from the fracking method of getting natural gas. People have had their water supplies poisoned by the process–how can we do anything that endangers our precious limited supply of water. But besides that, the burning of natural gas, whether here in the U.S. or overseas, still adds to global green house gases which add to global warming. We have got to take a stand–I expect your administration to take a stand–to stop adding hydrocarbons to our atmosphere, and to put our money into alternative forms of energy production.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Angela Putt

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sally Shannon

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. All reports show that much damage is done by fracking, to people, the economy, and the environment. Please do not let this happen. Thank you very much.

Sincerely,

Sally Weidemann

RE: 2012 LNG Export Study

To Whom it May Concern:

Since we obviously have achieved "energy independence," there is no need to further destroy the environment - and our health, so that big oil and big gas can make more $$$ by exporting our treasure! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. With the droughts, fires, extreme heat of 2012 and Hurricane Sandy it should be clear what trajectory we are now on. Is this the world you want your girls to inherit? Hydraulic fracturing is being proven to damage our environment and our health. There are many studies which are showing this. The most recent study published in Nature magazine also indicates that it is a significant contributor to global warming. With up to 9% of the methane released into the atmosphere (and methane being 20 times more potent than carbon as a greenhouse gas), this is not a technology that should be allowed to run amuck. We need a moratorium on hydraulic fracturing until we can regulate and manage its many detrimental side effects. Please stand up to the fossil fuel industry and deny all applications to export natural gas. Please do not sacrifice the long term health and well-being of our people and the planet for a short term economic boost that might come from increasing our exports. It's simply very short-term, myopic thinking that will lead to no good.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

It's bad enough that fracking may be seen as necessary by some people in order to provide energy for the U.S. to use. It is much worse to see it as necessary to sell energy to others, thereby destroying our environment simply to allow some companies to make a profit. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Seth Kaufman

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. It should not be done to supply the U.S. with gas, let alone exported!! Huge amounts of methane are being released into the atmosphere at fracking wells right now; methane is 25 times as powerful as carbon dioxide as a greenhouse gas. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I live in New York State which has been recently seeing a positive resurgence in agriculture. More and more people are depending on NYS farms for locally grown crops and locally produced dairy and meats. We have seen in Pennsylvania, counties that allow fracking have suffered an 18.5 percent decrease in dairy milk production, while milk production in counties with no shale drilling has increased. Fracking has serious affects on air and water quality. It also causes competition for resources that agriculture depends on. Please reject the applications to export fracked gas. It will just put too much pressure on states and counties to permit fracking at all. We cannot let the profits of the gas and oil industry take precedent over the health of our citizens and the health of our environment.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Andrews

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lee Hoekje

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Walter Birdwell

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Alex Vollmer

RE: 2012 LNG Export Study

To Whom it May Concern:

Directional hydrofracking of shale poses huge toxic threats to communities and regions where it is done: huge threats to public health and safety, to water supplies, and to escalation of climate change. Exporting it ramps up that activity, for the profit of oil and gas companies at the permanent expense of the public. Exporting it is asking Americans to further sacrifice their health and water supplies to the altar of oil and gas industry profit.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Crist

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I thought the Big Idea behind fracking was to enable the U.S. to become energy-independent. How does allowing exports of fracked gas help that? We DO know that's fracking is dangerous to the environment, and there's still too much we DON'T know about its impact. PLEASE PROTECT OUR PLANET: it's the only one we have!

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sharon Lohrding
4131 Harlan Shope Rd

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Cynthia Small

RE: 2012 LNG Export Study

To Whom it May Concern:

It is pure folly for the US to sell fossil fuels including fracked oil and gas outside our borders with the exception of product that can not be stored for future use underground etc.. Let's think ahead a few steps. These precious resources must last for moderate usage by our citizens for eons in a manner that will not promote global warming OR endanger our future energy security. Please do not approve the sale of these fracked products for export or exportation of our coal resources. We WILL need them one day. Thank you.

To Whom it May Concern:

I know that stopping exports of anything is anti-capitalism, and therefore anti-American. But the truth is that capitalism, even with environmental regulation is not adequate to stop the use of fossil fuels which cause climate change emissions when burned. Natural gas is often touted as "cleaner" than other fossil fuels - but the unfortunate truth is that it is NOT. Looked at in a full life-cycle way, from extraction to use, a natural gas power plant emits as much harmful climate change emissions as a coal fired power plant. Stand up to the fossil fuel industry and deny all applications to export all fossil fuels!!

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James PHELPS

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carolyn Pressley

RE: 2012 LNG Export Study

To Whom it May Concern:

For Heaven’s sake, we are burning up the prairie in North Dakota the night sky looks like a large metropolitan area were it was grassland six years go! They are burning off enough totally wasted natural gas to heat millions of homes, polluting the air and water as they do so. How insanely shall we go about this business? Shall we not call a halt now? For the sake of our resources, our air, our water, our children, our grandchildren, our beautiful planet and ourselves sPLEASE!!

RE: 2012 LNG Export Study

To Whom it May Concern:

If you change the letters of fracking to something that has few letters but starts with a F, you will know what Fracking does to the beautiful land of our country and what it gives to the wealthy few who own the oil companies. Mr. President, we put you back in office so you would give us the change you claimed we would get. NOW is the time to put your muscles behind serious environmental change. If you have not been somewhere to see what fracking looks like and what it does to the water table and the lives of the people who live near, please go. Do not allow fracked gas to be sold ANYWHERE.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Cannatella

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jill ganassi
2 Park Ave
Eastchester, NY 10709
U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Help save the environment!

To Whom it May Concern:

Fracking is a public health, public water and environmental threat to American communities and the climate. The demand for fracked natural gas would dramatically increase if exporting is allowed, providing a short-sighted, small-minded economic rationale for increasing fracking in the United States. Sustainable, clean, domestic energy development is needed— not an expansion of the dirtiest form of natural gas production there is. Please deny all applications to export fracked natural gas to ensure a safe, clean transition to a cleaner, greener, energy sourcing mix for the USA.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking destroys land, much worse than natural disasters. The profiteers of fracking reap the benefits of sales to foreign countries and do little to correct the damages done to land where many of our Native Americans live. Native Americans do NOT have the resources to counter or fight the ruin that will result on their land. American history should not be repeated...taking Native Americans out of their reservations in the past...now, destroying their homes/reservations so the fuel cartels get wealthier and get tax breaks. This is SO UNFAIR, UNJUST. PLEASE, REJECT all the fossil fuel permits for fracking. If these fossil fuel companies want to use our American soil for their tax-free profits, our government should insist that they invest in solar, wind, hydro energy, in manufacturing the equipment for energy projects for U.S. consumers. NO FRACKING and NO destroying our land by fracking!! PLEASE do what is right and just. May God bless you, and God bless our great country. Sincerely, H G [HELEN] TALBO taljoet@msn.com

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Virginia Lawson
134 Miiles Ave
Syracuse, NY 13210
U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

As a retired rancher who has experienced the effects of fracking first-hand, I can only say that to live through this hell is worse than your most awful nightmare. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary Nichols

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I've just been learning about the Dust Bowl - massive environmental disasters caused by human ignorance of the effects of their actions. Those disasters were confined to the Midwest, but with Climate Change we are looking at massive disasters and massive suffering on a truly global scale. And in this case, it is not caused by human ignorance, but a refusal to acknowledge scientific fact and a lack of imagination to discover the solutions that surely exist. Please consider our children and their children rather than politics as usual and established big business interests. I am sure a majority of citizens and voters and especially those still too young to vote, but who will be most impacted by your actions, support caring for environment and our future by not exporting fracked gas.

Dear President Obama, You no longer have to concern yourself with seeking another term in office. As such, I respectfully urge you to aggressively pursue your plans for the development of sustainable energy sources that do not pillage our planet. Make your footprint in history by beginning a real reduction in man’s footprint on the environment. Thank you, Mr. President, for your hard work during your first term. The reins are yours again; now is the time to run with it. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

C Breen

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking proponents point to the production of domestic energy products as one of their main reasons for wanting to risk our air and water resources. Sending this gas overseas not only defeats that purpose, but increases the price of its domestic use. NO to exporting of fracked gas!!

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

What about striving for "energy independence”, which we were told for decades was our ticket to national security? What about the sheer waste of energy in transporting gas over longer distances, of super-cooling it for LNG, of transferring it from the ground to trucks, to pipelines, to storage tanks, to ships? I've read about the overall project at LNGWorld.com. The fossil fuel companies intend to move this gas back and forth across the ocean, sometimes into and out of vast storage owned by one of our too-big-to-fail banks, in order to monopolize and move world energy prices upward. This is not about efficiency, or jobs, or any kind of benefit to the American people. Our President must tell this story and oppose the project. It concentrates power and money in the wrong hands.

RE: 2012 LNG Export Study

To Whom it May Concern:

Please notice many citizens are trying to be heard around the noise of the corporations involved, who do not intend to clean up their messes, but force them on the public to finance their profits. Stop the madness! Protect people above profits. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kathleen Downes

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We are absolutely opposed to the fracking in our community and along with other community members are working with our County Board to deny revisions to our land use codes that would permit oil/gas companies to begin exploration for fracking operations on county land. We urge you, President Obama, to press ahead for legislation that would mitigate the effects of climate change. Encourage us all learn to conserve and reduce our reliance on non-renewable energy - this is a critical time in our history - we need to develop every sustainable, renewable resource possible and leave fracking and the selling of fracked oil/gas in the dustbin of history.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dhyana McCraig

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a terrible, in fact, a hideous idea from start to finish. And to export it is a nightmare scenario. Why would we want to destroy other peoples' water, air and land. It is so awful that mega corporations are rushing to do this here. We only have one shrinking earth. Let's work on renewable energy solutions only, not despoil our one earth. That is dangerous craziness.

RE: 2012 LNG Export Study

To Whom it May Concern:

We- our Nation- is already tapping into energy reserves that should be in the bank for future generations. We have done the same thing with money- OTHER people's money- so that we may enjoy a life style beyond our means. Stop this export of gas & oil... and begin living within our means, as quickly as we can. If that requires shutting off drilling permits, so be it. At the very least, get the auto industry to gear up for CNG-powered vehicles, to wean ourselves from oil imports. ..

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Name Foerster

RE: 2012 LNG Export Study

To Whom it May Concern:

The air we breathe can't be easily replaced. Nor can our land or water. Yet there are many alternative energy means and that is what we should focus on instead of techniques that could be harmful to the environment. What we need is a much stronger push from government and utilities to bring as much green energy as possible to America. What can help the environment and our national security as much as relying on the very nature that sustains us? Relying on something like fracking or oil is not the way to go in the future, green energy is. This is about thinking for the future – for our planet and our country. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Donald Mallow
Glenwood Ave
Leonia, NJ 07605

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. People living near fracking operations cope with terrifying local impacts: contaminated—even flammable—drinking water, cancer-causing air pollution and smog, massive open pits full of toxic wastewater, huge fleets of diesel trucks, chemical spills, and pipeline explosions. Some residents have even found fracking chemicals and heavy metals in their blood. It is the responsibility of your Administration to protect citizens from these unnecessary health risks & threats, so I urge you to reject applications to export fracked gas. Would you want to live near fracking operations?

Sincerely,

Judith Young

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Exporting our Environmental energy reserves seems to be a particularly foolish thing to allow – in this era of rapidly diminishing worldwide energy reserves. Allowing the export of our Environmental energy is yet another example or immediate gain at the expense of future existence. Our Environmental reserves do not contribute to global warming if they remain in the ground. Do not permit the export of our Environmental energy reserve!

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Helen Sun

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. What is tragic here is that natural gas is, in abstract, cleaner than oil. Unfortunately, the production process of fracking obviates that, and the refusal of the companies involved to address the waste products of their process, or allow public knowledge of it, is prima facia grounds for rejecting it entirely.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Daryl WOLKEN

RE: 2012 LNG Export Study

To Whom it May Concern:

Here are the big problems with it - It can’t be drilled in the regular way. The gas and oil have to be displaced by literally millions of gallons of water, mixed with chemicals which presumable expand in the mix. The mixture is pumped into the well under extremely high pressure. The result is that the rock layers fracture, and the gas/oil is allowed to rise and be accessed. Yields are small, so this has to be repeated thousands of times. In the process, local water tables are often contaminated by the oil and gas seeping into the fractures, as well as the undisclosed chemical mixes. Also, since so much water is required, nearby aquifers which are needed by communities and agriculture, may be permanently damaged. No one can really control what they suck out. Finally, the wells are very short lived, maybe as few as 18 months. Lots of destruction, much of it permanent. I think the grand total contribution of fracking to the US Oil demand is approaching the 10% range, and is never projected to be greater than 20%, and will be depleted quickly (all the somewhat "affordable" stuff will be gone, even if very high cost reserves remain). It is a non-renewable system that damages or destroys other renewable systems. I vote NO FRACKING!

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Not only is fracking for natural gas destroying our environment, the air, water and landscape, but the sand used in this process comes from Western WI and eastern MN were at this moment we are fighting the sand companies. This process strips away our bluffs and rich farmland. It threatens our aquifers and destroys the way of life for those of us adjacent to these industrial frac sand mines. There is very little regulation of this type of mining in Wisconsin as it falls into the category of non metallic mining...same as a sand and gravel pit. Mind you, these mines are not gravel pits. As you know, most of the midwest has been and continues to be draught stricken, yet these frac sand mines continue to operate with no limits on the amount of water used. Some estimates indicate the high capacity wells used in this mining take 1 million gallons of water per day... When will the destruction of our planet stop? When we run out of water? When our lands are parched and dry unable to grow what is necessary to feed us? I ask this administration to look at what is happening from start to finish in this industry. The fracking for sand is destroying WI and MN and the fracking for natural gas is destroying the eastern seaboard, ND and CO.... It is also my understanding that there is fracking going on in Teddy Roosevelt National Park! That is a disgrace. This is and has been a sparkling jewel in the midwest...how can we let this continue? Teddy would be so disappointed in the world around him if he were alive today. Sincerely, Jeanne Harris Nutter

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jack Conrad
2958 N Beachwood Dr
Los Angeles, CA 90068

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Natural gas from fracking may have an important place in a policy of reducing carbon emissions. However, we need much more information and regulation on current fracking methods before the massive expansion needed for exports.

Sincerely,

Robert Elgin

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a huge toxic threat to American communities and a huge threat to the climate itself, which we rely on for our very existence. So how does it make sense to allow fracked gas exports, which would dramatically increase the scale of poisonous pollution in our communities from fracking, by increasing demand for fracking in the United States. Giving the fossil fuel industry access to huge foreign markets is a huge mistake for the well-being of ordinary people and the climate itself. Stand up to this particularly foul and polluting fossil fuel industry. Deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Elissa Ziemba

RE: 2012 LNG Export Study

To Whom it May Concern:

PLEASE DEFEND OUR ENVIRONMENT AND PROTECT OUR HEALTH BY LIMITING FRACKING. THE LIMITED STUDIES THAT HAVE BEEN COMPLETED TO DATE ALL INDICATE THAT FRACKING IS A DANGER DUE TO EXTRAORDINARY WATER USAGE AND A PLETHORA OF DEADLY CHEMICALS. FURTHER TESTING IS NEEDED SO AS TO ASCERTAIN PROPER REGULATIONS AND RESTRICTIONS ON THE PROCESS. THERE IS NO GREATER THREAT TO THE ENVIRONMENT AND THEREFORE TO HUMAN LIFE. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas, unless fracking is completely banned as a tool to get gas. The ground we stand on being destroyed is NOT a good legacy for our generation...we're already destroying enough without adding that to our great gift. Suggest instead you take the billions in tax breaks and handouts that Shell, etc., gets and give that to the natch gas industry if they need it (but only a portion, give the rest to schools so they don't have to hold bake sales to educate our children!!!).

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michael Culhane

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Keith Robb
2165 Poplar Ave, Apt 2
Memphis, TN 38104

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I thought the idea of developing national resource was for the purpose of supporting the U.S. use/misuse of natural resource, not selling our product out to the world community and ramping up the competition and the prices. Fracking is too dangerous. We need the resource here; I have done everything I can to give you a second term. Put your money where your mouth was.

Sincerely,

Marilyn Muir

To Whom it May Concern:

There are scientific reasons to be concerned about the harmful potential of fracking. If it is so important for the US to get energy from this natural gas that we would place our own citizens at that risk, then we should keep the extracted gas and not export it. Placing our citizens in this potential harm should not be done in pursuit of private profit. If it must be done, it should be carried out on a non-profit basis by the government.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Recent studies suggest that methane leaks may nullify any environmental benefit of gas from fracking (versus oil or coal). And long-term medical issues require extended and more thorough study.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Because we’ve been told our opinions matter, folks like me write email messages, sign petitions, and make public comments about key issues that affect our lives—issues such as Fracking. Big Oil and Gas energy Corporations hire banks of lawyers and repeatedly run TV ads to downplay the risks of Fracking. But those risks are real, and when the environment or a community is harmed, it is the taxpayers who are left with the cleanup expense. The science tells us that Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Haven’t we learned the lesson that Corporations are not flesh and blood people—human beings with interests other than the profit motive? We have only one home—i.e. Planet Earth, and its health is under assault. Please listen to the voices of the real flesh and blood people who are asking our Federal Officials to stand up to the monied interests of the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Castillo

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary Loberg

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Wendy Walter
17360 Park Ave
Sonoma, CA 95476
U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gayle Peters

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking will destroy the tourism industry of the Finger Lakes area of NY. It has already done it in Pennsylvania. Our area has built itself around tourism dollars. Our own vacation rental brings in plenty of dollars from other countries that cannot be replaced with gas dollars. Most of our region relies on well water for drinking. Risking it is playing Russian Roulette with us. I would like to see "Government by the people, FOR the PEOPLE." Tom Kopf

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. In addition, please require that fracking companies inform the communities they are working with (and under) which chemicals they are pumping into the ground. The public health should be paramount in any drilling operation. Sadly it is not at this point in time. Letting them make informed decisions (or at least warning them what chemicals they are dealing with in the drilling processes) is a relatively small but important step in the right direction. If fracking for natural gas is to be an increasing portion of our nation’s energy plan, it should be done as responsibly as possible.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The oil and gas industry tells us we can be foreign oil free with all our natural gas deposits but now they want to sell it over seas. More mistruths! By permitting these 16 projects, you are encouraging more drilling, more air pollution, more water pollution, and more toxic waste water to be injected into our ground. Washington County, Ohio is becoming a toxic waste dump for "brine" from the fracking wells in PA, WV and OH. Please do not sign these permits to ship natural gas overseas until we have the study from the EPA so we know what we are dealing with. We have exempted the oil and gas industry from most of the air, waster and land safe guards we have in place to protect our people and our environment. This is not fair! Industry over citizens is wrong! I for one, cast my vote for you because you were developing an energy policy using all types of energy. What happened to the development of renewables? Get back on track for a better environment. All those vegetables Michelle talks about will not make us healthier if we have poor air and foul water! Climate change is happening and we must leave fossil fuels behind for more responsible energy sources for our earth!

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Peters

RE: 2012 LNG Export Study

To Whom it May Concern:

There are JOBS here in the USA if we would recycle our oil. Hydraulic fracturing causes earthquakes. Earthquakes cause injury, death, etc. It is PAST time to honor safety first principals. For gas,..., we murdered the guy that had the diesel engine running on peanut oil...

Sincerely,

Natalie Cox

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Alex Christodoulides

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Hall

RE: 2012 LNG Export Study

To Whom it May Concern:

For years, we've been told that energy independence was a goal we should strive for as Americans. Now that we have found extra natural gas exporting it is the LAST thing we need to be doing. This is domestic energy supplies that should be used to ensure the national security of our nation. Please do not allow this energy to be exported so that someone can make a buck. There are more important issues here... environment, security, cost of energy, etc.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ron Hansel

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bryan Sepp

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sylvia Meagher

RE: 2012 LNG Export Study
To Whom it May Concern:

Whatever happened to "energy independence" for the United States? Increased mining and drilling destroys the health and usefulness of American communities and should only be approved to supply consumers domestically. Even that is questionable given the urgency of climate change. I live in a coastal community and we are starting to experience what is locally referred to as the King Tides. This means sewers are overflowing and streets that have never flooded before are flooding during high tides due to sea level rise. Please join the twenty-first century and create a cohesive energy policy for our nation. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Theresa Nuccio

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kelly Clark
