U.S. Department of Energy
RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Thomas Reynolds
66 New Salem South Road
Voorheesville, NY 12186
U.S. Department of Energy

Windsor, CA 95492
Re: 2012 LNG Export Study

To Whom it May Concern:

Is there anything more insane than the Federal Government permitting gas exports to benefit a few billionaires while at the same time permitting environmentally devastating fracking with the argument that it will help the U.S. become "Energy Independent?" Is this a cruel joke or is it simply the energy industry ALONG WITH THE FEDERAL GOVERNMENT saying, "screw you..." to the voting public??? The Obama administration hasn’t done jack to address the climate change we are experiencing NOW. And it is on the verge of selling out the people of the world by approving gas export terminals for political benefit. This is an opportunity to show a little courage by refusing to allow the creation of gas export terminals (and by refusing to permit the XL pipeline).

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is inherently unsafe, a toxic threat to American communities and exacerbates the climate change that is already occurring at a faster rate than thought possible only a few years ago. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States, exactly what we must not do. Therefore, all applications to export natural gas must be rejected. Instead, we must invest in, and dramatically expand, sustainable, safe and environmentally-friendly non-carbon energy sources.

Sincerely,

A.J. Averett

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anita Allen

RE: 2012 LNG Export Study
To Whom it May Concern:

How many states and cities do will we be spending the money on rebuilding! Floods, burning heat, droughts, contaminated—even flammable—drinking water, cancer-causing air pollution, massive open pits full of toxic wastewater, huge fleets of diesel trucks, chemical spills, and pipeline explosions. Some residents have even found fracking chemicals and heavy metals in their blood. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Obama administration: Reject applications to export fracked gas.

Sincerely,

Annette Saint John Lawrence

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Esther B. Wolf
5433 Leary Ave. Nw (Unit317)

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to agricultural and municipal water - of which the western states are already suffering a shortage due to long-term drought - and the climate in general. We should be reducing the market for it, not creating a greater one by allowing fracked gas exports. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

The science is clear and convincing that we need to end our addiction to fossil fuels as quickly as possible. We can start by not permitting projects which foster their continued use and investing in (subsidizing) the development of alternative energy sources instead. This will also create the better quality jobs our nation desperately needs. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Barbara Silverstein

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Brooke Wagenseller

RE: 2012 LNG Export Study

To Whom it May Concern:

Right here in Maryland a facility built to import LNG, now wants to convert to exporting LNG, which would sure fuel the demand for more fracking in the Marcellus shale, some of which is in Western Maryland. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Let’s quit these giveaways to the fossil fuel industry and transfer that support to renewables and clean energy!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carole mayer

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Any natural gas we produce domestically should be kept in the US for domestic consumption, not exported to the highest foreign bidder. This goes for other energy sources as well, i.e., coal and oil. Our energy production is a national security issue. As such, no domestically produced energy should be exported. It should be retained solely for our domestic consumption. These resources belong to the American people, not the energy corporations. Autarky is our goal and domestically produced energy will be the means to achieve it.

RE: 2012 LNG Export Study

To Whom it May Concern:

As a resident of Lexington VA in the beautiful Valley of Virginia, I know that my home may be at risk because of the rock underlying this area. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This extraction technology is a losing proposition both locally and worldwide. Until serious oversight makes it necessary, these fossil fuel drillers won’t even look for cleaner ways to get this gas. Please stand up for our people and for our good land and water, and send these permits back until they can make a safe, non-toxic job of it!

Sincerely,

Margaret Dyson-Cobb

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carl Patterson

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. On a personal level I’ve worked hard to be a green interior designer and an organic steward of the small acreage I purchased in Ohio. I share my time by showing my strawbale home to anyone who has interest as well as the landscape where more and more native plants are being grown and the water is being conserved. Why do this if the gas and oil companies will be allowed to run rampant over my land or the land next to me? Why even bother when the water aquifers we treasure will inevitably become toxic? Natural gas may be clean to burn the extraction processes to procure this gas from shale is anything but. We feel as though our government is throwing us to the whims of oil and gas corporations who care only about their profits and most certainly, as has been demonstrated repeatedly, not about our environment or the people and living things this environment sustains. We can not survive without clean water. If you move forward with this approach to extract and sell shale gas we will no longer have our most precious resource of clean water and we will not survive. It is past time regardless of the dollars spent to lobby our government to turn to renewable clean energy resources and leave dirty fossil fuels behind for good! Please protect us! Please protect our health and the future health of our families and your citizens. Money will never be able to replace contaminated aquifers or the people who become sick and die from the exposure to this dirty industry.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dieter randolph
3529 Haines Road North

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kaye Hampton
1605 S. Lipscomb
Amarillo, TX 79102
U.S. Department of Energy

To Whom it May Concern:

If fracking is safe, why are we not allowed to know what chemicals are injected into the ground? If we must impose fracking for energy independence, why do we need to frack so much as to create an export market? There is something fishy about the way fracking is imposed upon communities. I don’t trust this process. It should be transparent. There should be nothing to hide. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Frank Scanzillo
69 Barry Lane

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking without the BREATHE and FRAC Acts is extremely dangerous! Too much ground water is contaminated with hazardous chemicals found in fracking fluid and emissions from fracking operations negatively impact air quality! Please consider funding more research and construction of plants that produce biomethane through the process of anaerobic biodigesters, which use plant and animal waste to produce energy!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Alice Artzt
51 Hawthorne Ave.
Princeton, NJ 08540

RE: 2012 LNG Export Study  
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I am a board member of a local water district. There is great concern in water about the safety of our water sources. Fracking threatens our potable water supplies in three ways. It uses enormous amounts of water to produce the fossil fuel; the process itself can pollute water sources; then the toxic byproducts must be stored and or dealt with, adding further danger to the water supply. All the fuel in the world will do us little good if we have to use it to clean up the mess that obtaining it has made. It's a circular process. Please don't let it continue.

Sincerely,

Helene Brazier

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Recent research even suggests that methane emissions from fracked natural gas operations are so high that fracking may be worse for the climate than coal. (2. Jeff Tollefson, "Methane leaks erode green credentials of natural gas," Nature, January 2, 2013) Plus, people living near fracking operations cope with terrifying local impacts: contaminated–even flammable–drinking water, cancer-causing air pollution, massive open pits full of toxic wastewater, huge fleets of diesel trucks, chemical spills, and pipeline explosions. ("Hydraulic Fracturing 101," Earthworks) Some residents have even found fracking chemicals and heavy metals in their blood. (Eliza Griswold, "The Fracturing of Pennsylvania," New York Times Magazine, November 17, 2011)

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Karen Perry

To Whom it May Concern:

NO NO NO!!! Fracking is a VERY toxic threat to American communities and the climate!! Allowing fracked gas exports dramatically increases the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets!! This is morally WRONG, in the face of GLOBAL WARMING!! ANSWER to the will of the majority, NOT the minority in oil!! Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jeanne Friedman
215 West 90 St
New York, NY 10024

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Joshua Henderson

RE: 2012 LNG Export Study
To Whom it May Concern:

UNBELIEVEABLE, you would even consider permitting even more fracking projects! Stop exporting natural gas, keep it here and use less coal. GREED is the only reason to allow more fracking. Fracking is a toxic threat to American communities and the climate. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jackie Reynolds

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Fracked gas is mostly methane, a potent greenhouse gas that leaks from natural gas wells, pipelines, and other infrastructure. Recent research even suggests that methane emissions from fracked natural gas operations are so high that fracking may be worse for the climate than coal. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is an outrageous toxic threat to American communities and the climate! Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas, now! Thank you.

Sincerely,

Kevin Havener

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Daveretta Heintz

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Louis Camillo

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary Johnson

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Go Ethanol: 1. Almost every country can become energy independent. Anywhere that has sunlight and land can produce alcohol from plants. Brazil, the fifth largest country in the world imports no oil, since half its cars run on alcohol fuel made from sugarcane, grown on 1% of its land. We can reverse global warming. Since alcohol is made from plants, its production takes carbon dioxide out of the air, sequestering it, with the result that it reverses the greenhouse effect (while potentially vastly improving the soil). Recent studies show that in a permaculturally designed mixed-crop alcohol fuel production system, the amount of greenhouse gases removed from the atmosphere by plants and then exuded by plant roots into the soil as sugar can be 13 times what is emitted by processing the crops and burning the alcohol in our cars. We can revitalize the economy instead of suffering through Peak Oil. Oil is running out, and what we replace it with will make a big difference in our environment and economy. Alcohol fuel production and use is clean and environmentally sustainable, and will revitalize families, farms, towns, cities, industries, as well as the environment. A national switch to alcohol fuel would provide many millions of new permanent jobs. No new technological breakthroughs are needed. We can make alcohol fuel out of what we have, where we are. Alcohol fuel can efficiently be made out of many things, from waste products like stale donuts, grass clippings, food processing waste—even ocean kelp. Many crops produce many times more alcohol per acre than corn, using arid, marshy, or even marginal land in addition to farmland. Just our lawn clippings could replace a third of the autofuel we get from the Mideast. Unlike hydrogen fuel cells, we can easily use alcohol fuel in the vehicles we already own. Unmodified cars can run on 50% alcohol, and converting to 100% alcohol or flexible fueling (both alcohol and gas) costs only a few hundred dollars. Most auto companies already sell new dual-fuel vehicles. Alcohol is a superior fuel to gasoline! Its 105 octane, burns much cooler with less vibration, is less flammable in case of accident, is 98% pollution-free, has lower evaporative emissions, and deposits no carbon in the engine or oil, resulting in a tripling of engine life. Specialized alcohol engines can get at least 22% better mileage than gasoline or diesel. Its not just for gasoline cars. We can also easily use alcohol fuel to power diesel engines, trains, aircraft, small utility engines, generators to make electricity, heaters for our homes and it can even be used to cook our food. Alcohol has a proud history. Gasoline is a refineries toxic waste; alcohol fuel is liquid sunshine. Henry Fords early cars were all flex-fuel. It wasnt until gasoline magnate John D. Rockefeller funded Prohibition that alcohol fuel companies were driven out of business. The byproducts of alcohol production are clean, instead of being oil refinery waste, and are worth more than the alcohol itself. In fact, they can make petrochemical fertilizers and herbicides obsolete. The alcohol production process concentrates and makes more digestible all protein and non-starch nutrients in the crop. Its so nutritious that when used as animal feed, it produces more meat or milk than the corn it comes from. Thats right, fermentation of corn increases the food supply and lowers the cost of food. Locally produced ethanol supercharges regional economies. Instead of fuel expenditures draining capital away to foreign bank accounts, each gallon of alcohol produces local income that gets recirculated many times. Every dollar of tax credit for alcohol generates up to $6 in new tax revenues from the increased local business. Alcohol production brings many new small-scale business opportunities. There is huge potential for profitable local, integrated, small-scale businesses that produce alcohol and related byproducts, whereas when gas was cheap, alcohol plants had to be huge to make a profit. Scale matters; most of the widely publicized potential problems with ethanol are a function of scale. Once production plants get beyond a certain size and are too far away from the crops that supply them, closing the ecological loop becomes problematic. Smaller-scale operations can more efficiently use a wide variety of crops than huge specialized one-crop plants, and diversification of crops would largely eliminate the problems of monoculture. The byproducts of small-scale alcohol plants can be used in profitable, energy-efficient, and environmentally positive ways. For instance, spent mash (the liquid left over after distillation) contains all the nutrients the next fuel crop needs and can return it back to the soil if the fields are close to the operation. Big-scale plants, because they bring in crops from up to 45 miles away, cant do this, so they have to evaporate all the water and sell the resulting byproduct as low-price animal feed, which accounts for half the energy used in the plant.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracked gas is one of the worst actions on this planet. The public doesn't realize that this fracked gas is being exported. They think this will help make us more energy independent, when, in fact, it will make us more dependent on foreign oil, because we are deporting it (mostly to China). Stop fracking. Stop exporting our natural resources. Besides the nasty methods of fracking, polluting millions of gallons of water during a nationwide drought is insane. Why would we waste our valuable water so that a few can get filthy rich? Follow the money, and it is leading to you. I've been your supporter through most of the federal issues, but fracking really gets me upset. It is just nasty.

Sincerely,

Nancy Seaberg

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking is messy and dangerous. We need to be focusing on clean fuel extractable through clean processes. Fracking is not clean and we do not know the long-term effects of pumping huge amounts of water deep into the earth. Our corporate entities who continue to thrive in spite of the environmental degradation they produce, need to move in a different direction in order to slow down our demise. We have turned the earth into a human lab experiment and it is failing. We can no longer afford to be be careless. Please reject applications to export fracked natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Patrick wilkins

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Clark
22 Old New Salem Road
Petersham, MA 01366

Stand up to the fossil fuel industry and deny all applications to export natural gas.

First the fossil fuel industry sucks tax dollars out of the economy with government subsidies they don’t need; and now like vampires want to stick straws into the earth and suck out whatever they can find that will make them additional profits; and the final insult is that they sell it to foreign nations, while we pay more at the pump. What a incredible but lucretie scam for this industry. Where are our representatives; oh yea, they represent big oil and coal.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Tuttle
2816 Durham Road
Wake Forest, NC 27587
U.S. Department of Energy

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Paxson
19 Upham Avenue
Dorchester, MA 02125

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Peirce

RE: 2012 LNG Export Study

To Whom it May Concern:

Natural gas fracking is a toxic threat to American communities and the world's climate. A very few people will benefit while many will suffer from this aggressive assault on the environment and public safety. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Fracking is not a route to energy independence, as is so often touted, but a way for the fossil fuel industry to financially benefit from the world's increasing demand for natural gas. This is not in the best interest of the people of the United States. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Thadeus Dziekonski

RE: 2012 LNG Export Study

To Whom it May Concern:

NO NO NO NO NO NO NO NO NO!!! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Theodore Schram

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking not only releases toxic fumes into our atmosphere, it also poisons our water. Water is one of earth’s most precious elements. It is essential for all life and across the globe it is becoming scarce in it's clean form. Water is one of our main resources we should be protecting it. We can’t drink, farm or wash with gas. But we can develop cleaner energy sources, such as the wind and the sun. Please protect our country’s air and water by stopping the expansion of tracking.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

William Dane

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Judy Thompson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tracey Hamilton

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Borys Krupa

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I don't want fracking done anywhere. I don't think it is safe and all the chemicals have to go somewhere. That somewhere is our water supply. The earth gets enough abuse as it is and we don't need fracking. We need to invent alternative fuels instead of stubbornly wanting to rape the earth of every resource it has. What is going to be left for our children and grandchildren? An earth that is overheated and polluted water from fracking. What does a person want when they are hot? A cold glass of clean water. Will it be there for our grandchildren or are we going to use up everything and just let them fight for survival. It seems that it is your call on this mess now. Please think of the future. We can figure out ways to have energy without ruining the earth we have left.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Donald Bruce

RE: 2012 LNG Export Study

To Whom it May Concern:

As a farmer in upstate New York, I’m especially concerned about the local environmental and health hazards associated with hydraulic fracturing, as well as the effect of the process on methane release. I’m sympathetic to national security arguments around local energy production, which is why I’ve invested in a start-up wind farm. I see no value to the U.S. in taking incalculable environmental risks to produce fuel that will be shipped overseas. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Snell

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Steven Gersman

RE: 2012 LNG Export Study
To Whom it May Concern:

Americans have been through the problems with coal for decades, realizing too late the threats to health and the devastation of the environment from the mining and burning of this very dirty fossil fuel. We must be proactive in preventing those same mistakes in fracking for gas and oil. Fracking is a toxic threat to American communities and the climate, and we don’t want more Americans suffering so that oil and gas companies can frack UNCHECKED just to ship the gas overseas. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. PLEASE SAVE US FROM THIS CATASTROPHY!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Daniel Safron

RE: 2012 LNG Export Study

To Whom it May Concern:

FRACKING IS A TOXIC THREAT to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. THIS WOULD DESTROY THE QUALITY OF WATER RESOURCES WITHIN THIS COUNTRY.....WHY SHOULD WE WEAKEN THIS COUNTRY FOR THE BENEFIT OF OTHER COUNTRIES.....CORPORATE GREED WOULD ALSO BENEFIT. THERE IS NO GOING BACK, ONCE IT IS APPROVED. PLEASE - PLEASE - CONSIDER THE ENTIRE RAMIFICATIONS OF FRACKING.....BETTER REGULATION IS ALSO NEEDED. THE CONSEQUENCES ARE SERIOUS.....AND THEY WOULD BE ON YOUR HANDS. PLEASE - CHECK WITH OTHER RELIABLE ENVIRONMENTAL RESOURCES REGARDING THE IMPACT OF FRACKING. STAND UP - to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Elizabeth Catenacci

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. The total emissions of methane would add considerably to the buildup of global greenhouse gas emissions and accelerate climate change. Toxic pollution and a rapidly rising global temperature are not in our country’s best interest. We need to lower our country’s global CO2 footprint, not raise it. Reject fracking.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dr. Pam Akiri

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary Gordon

Spencer, NY 14883
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. While the energy industry contends that hydraulic fracturing is safe when certain guidelines are followed, experience suggests that guidelines are routinely ignored. Furthermore, industry funded studies should be approached with healthy skepticism. I don’t believe that this issue has been fully nor neutrally studied. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. In addition, by supplying additional demand for a fossil fuel we accelerate production of more carbon dioxide and thus global climate change, surely the gravest threat we currently face. Short term profits must not override the long term survival of untold species, including our own. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tony Keane
700 Dewitt Road
Rochester, NY 14580

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I know it seems like an economic win and a viable means of increasing US GDP, but it will adversely the quality of life on this planet for generations to come. I don’t believe planetary climate stability, access to pure air and water, and healthy biodiversity should be compromised for a relatively short-term fix to our economy or global appetite for fossil fuels. Invest in solar, wind, and other sustainable energy alternatives. We don’t need to continue exploiting our natural resources for the acquisition of fossil fuels.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Wendy Wilke

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anne Stein

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Zalewski
4317 Ne 24th Avenue

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. First, the process demands huge quantities of fresh water, which in times of drought, endangers the processes of life itself. What good is the money gained from fracking if our food supply is eliminated due to the lack of fresh water? Even more importantly, we need fresh water every day in order to sustain life itself. Secondly, some, if not all of the chemicals used in the fracking process are highly toxic, and present huge environmental pollution problems, which the fracking companies tend to understate, while they attempt to deflect their responsibility for the expenses of disposal and collateral health costs to local government systems. Thirdly, the process releases huge quantities of methane gas, a greenhouse gas which is over 10 time as potent as CO2 as a cause of global climate change. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. The costs to our environment and health of such activities far outweighs any economic benefits that the sale of these resources would provide. What good is allowing a relative few to profit from the destruction of our common biological support systems, and the potential for causing the mass extinctions of all life on the planet? Bottom line: No matter how you do the math, a world that runs on natural gas is a world wracked by climate chaos and extreme weather - deadly superstorms, wildfires, droughts, and floods. We need to move away from fossil fuels, not make massive investments in new infrastructure that will lock us into dirty fracked gas for years to come. I demand and implore you to take a long view of the effects of large scale fracking of both gas and oil. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Maurene McGrain
164 Washington Street
Gloucester, MA 01930

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

N Patel

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Keith Maxwell

FACT: Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Many landowners approached to lease mineral rights to drilling companies are not informed of the real risks to property and water sources. We're already fracking the whole of western PA and a good part of the Appalachian Mountains. If we're to have a green economy, we'd better start now or there won't be anything left to preserve. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ronald Datesman
4 Lockhart Circle Apt. J
Forest Hill, MD 21050

RE: 2012 LNG Export Study
To Whom it May Concern:

The proposal to export natural gas is totally unacceptable. I know that stories have appeared in newspapers in Costa Rica about this gas being imported there. The world can not expand its use of fossil fuels. How many more Superstorm Sandys can we handle? Our global climate is vastly more important than more profit for the gas industry. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Harvey Polster

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Diane Radovich

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Karen Moody

RE: 2012 LNG Export Study

To Whom it May Concern:

I am writing to urge that you reject the pending permits to build massive export terminals to ship natural gas overseas. As an environmental educator, I have paid close attention to the development of fracking in the United States, and I believe that as currently practiced, it is a toxic threat to American communities and the climate. While burning natural gas in the United States may be cleaner than burning coal, and may be necessary on a limited basis as a transition to green, sustainable energy sources in the future, allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Exporting fracked gas which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it produces 20%-30% more CO2 than burning gas in the U.S. Furthermore, exporting fracked gas would increase domestic prices, giving utility companies an incentive to use coal-fired power plants which are beginning to be phased out, largely due to the low price of natural gas and increasing U.S. carbon emissions overall. I just watched President Obama’s inaugural address, and I was heartened to hear him include climate change as one of the major problems that our nation must address. The natural gas created by fracking releases methane, a greenhouse gas even more potent than carbon dioxide, and one that frequently leaks from many phases of the fracking process. Increasing the scale of fracking at this point, particularly when there are many unsolved hazards in the processes and when the effort will not promote our energy independence does not benefit the United States and further endangers our entire planet. The only ones who win are the oil and gas corporations. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Theresa Kardos

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dave Schemel
11956 Spruce Canyon Circle
Golden, CO 80403

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Climate change is going to be directly related to fracking, the lost methane in the process of fracking is 20 times more potent than CO2 and will only accelerate climate change as we are already witnessing. Coupled with what the Chinese are doing putting another coal fired power plant on line every week for the next two years and the world is headed for climate disaster. The time is now to act, move off of fossil fuels no matter the cost. For the cost of destruction of the environment is priceless, and trillions won’t be able to fix what mankind has destroyed.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. And how will this help with global warming that you claim to be concerned about?!? Always remember that my children and your children and their children will have to live in the world we leave behind.

Sincerely,

Beth Stroh-Stern

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sally Hill

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking poisons drinking water with methane and other deadly chemicals, and not just into water we drink but the surrounding land and the air we breathe. How is it SO difficult to make THIS the priority over profits, small ones at that, for oil and gas companies that already make HUGE profits from their major business deals (which are also harmful to just about everyone, global warming is NOT a hoax... remember Hurricane Sandy?)

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking is being sold as such a wonderful thing for "energy independence". Well, I ask for whom? The people of this country will be left impoverished and their children's children trying to survive with dirty water and toxic soil. A few people will get rich, while many suffer. Who pays for those higher cancer rates, and plunging land values? Not the corporate raiders who plunder and then sell off shore... This is a “blood diamond” situation, and people are begining to realize it.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We must encourage oil and gas companies to divert their resources into renewable energy. Allowing them to continue their destructive practices takes us farther away from our goal of reducing carbon emissions and stopping the progression of global warming.

Sincerely,

Nancy Stephens
6102 Palmetto Trail
Amarillo, TX 79106
U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is not the easy solution it appears to be. The process actually INCREASES release of methane emissions and may increase global warming more than the coal industry. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Iskra Johnson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate, especially the climate. And that means the whole earth’s climate. It doesn’t matter that its burned in China, India or wherever, it effects the atmosphere of the whole earth. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Every well that’s drilled also releases, i.e., escapes, methane gas which is 10 times more destructive than CO2. Please understand, The Frackers are just after money, money, money!!! DENY all applications to export natural gas!!!

Sincerely,

Don Madden

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jean Frankenstein

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ron Denson
1103 Hanshaw Rd.

To Whom it May Concern:

Fracking is supposed to be for OUR energy independence, not so some extraction company can make megabucks selling it overseas. Fracking is "safe" when done perfectly. When has the extraction industry ever done that?? Fracking may be necessary, but is NOT safe. Regulations WILL be circumvented. There will never be enough regulators, with enough power, to control this industry. Please reign it in to make the USA energy independent, not so some companies can make big money polluting our water and air selling it overseas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John MacKenzie

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It is time we recognized the threat to our planet that fossil based fuels represent. Even if we got out all of the gas, the result would be pollution from the process and threatening levels of pollution in our skies. We must be tough about carefully scrutinizing every environmental threat. This should help encourage the American energy industry to put their efforts into developing alternative energy sources. To wait until all the traditional resources are gone and the world totally polluted is to wait too long. Your actions on this matter could help us form a better future for our country and not just support short term efforts to make a profit.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rosemary Stuart-Libbey

To Whom it May Concern:

I am a landowner in NYS in a community that is located over the Marcellus and Utica Shales. Like many people in my community, I voted for and contributed to the Obama campaign AND I support the effort to protect my community from hydrofracking. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We need more jobs and economic growth in the US- but exporting gas will not create positive economic development and will actually interfere with the kinds of businesses that do create good jobs and growth like green technology, organic and value added agriculture, tourism, and advanced green technology. Exporting gas will destroy property and communities in the US and provide very little economic benefit once the gas is pumped out and the water contaminated. It would be much better to export green energy technology instead, which would create jobs, build communities and lead to a cleaner global environment.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michelle Billmaier

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I cannot emphasize enough the potential dangers of fracking. Exporting would mean we want to increase fracking merely to make money. If gas/oil by fracking is a US resource, lets keep it here. not export because we have a current excess available.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Barbara Shaw

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I lived among natural gas wells. They ruined my life and everyone else’s who did not get rich. The land was poisoned, my neighbor died of benzene exposure, and I had a sinus headache until the day I left. Why do we the farmers not count? Why are we poisoning our way of life for people in other countries? Greed is the only thing I can think of. I am about to look for a new country I am so sick of being chased away by drilling.

To Whom it May Concern:

In the long term, it is difficult to think of a more pressing issue than the potential of climate change. While our culture seems to have an extremely difficult time with thinking about anything long term, it seems critical that we at least do not make decisions that will accelerate and/or exacerbate the problem, such as increasing the usage of fossil fuels. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Karen Day

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nora Lincoln

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Neil Rader

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. It also uses huge amounts of WATER, which is in limited supply around the world, including here in the U.S.: people often cannot get enough of it for drinking and/or for growing food crops. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. It would also increase the environmental damage even more, as we use more energy to make it transportable as well as to transport it. Please stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Barbara Clark

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. As an ecologist who has taught at the college level for 36 of my almost 75 years, these efforts are too premature to be considered safe or prudent at this time. There is a timescale in the global natural system that works on a much longer timeframe than the short term gain and its maximization principle that is the only thing of interest to the groups pushing this technology and the proposed schedule for further development and marketing of natural gas. Please restrain the greed rampant in the fossil fuel industry wherever you can.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking has is a toxic devastating threat to American communities, the climate, and the environment. Exporting fracked gas – which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it – produces 20%-30% more CO2 than burning gas in the U.S. Allowing fracked gas exports would dramatically drive up demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. No matter how you do the math–fracking spells disaster for a world wracked by climate chaos and extreme weather which I and other taxpayers will end up paying for. I want my government to stand up to the fossil fuel industry and deny all applications to export natural gas!!

Sincerely,

Lynn Manzione

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rebecca Yaffe
227 N Harold St.
Fort Bragg, CA 95437

New York, NY 10033
Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking involves forcing water under pressure into the ground. Using a non-renewable resource is totally irresponsible. Creating contaminated water that sits in open pools & pits contaminates the environment. Not only that it contaminates peoples homes, drinking water & neighborhoods. This is unacceptable. It also threatens peoples health. If this was in your back yard would you agree to fracking? Would you expose your family to this type of envirment? I don't think so, because you have their best interests at heart. Please stand up to big gas & do what is in the best interests of the people living in the areas where fracking is happening.

Sincerely,

Joanne White

RE: 2012 LNG Export Study

To Whom it May Concern:

The natural gas is our common resource. The Repiglickin’s constantly complain about energy independence. We should keep the gas in the US.

Sincerely,

Thomas Shefchik
1215 Permata Ct.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking poses a toxic threat to American communities and the climate. I live in Ohio, a state that has used fracking to create jobs at the expense of the environment. I am deeply concerned that fracking will become more prevalent across the country. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States. The fossil fuel industry is eager to gain access to foreign markets with increasing energy needs. Just because we have the resources doesn’t mean we have to use it, and protecting our air, water and land is a better choice. I ask that you refuse to sign all applications to export natural gas. It will be disastrous to tap into the overseas market.

Sincerely,

Marilyn Kohn

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Fracing requires the use of thousands and thousands of gallons of water which is ultimately made useless by the addition of toxic chemicals. Then this toxic mix is injected forcefully and ultimately pollutes our aquifers. Water that is safe and pure is becoming more and more scarce. Fracking would be outlawed in any country that fully understood the real costs. Further, allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up, protect our water, do not be intimidated by the fossil fuel industry. Deny all applications to export natural gas and begin the much needed process of outlawing all fracking and initiating much needed conservation efforts such as a reduction in speed limits on federal highways and the retrofitting of all schools, colleges, universities, libraries & other municiapoal buildings. The military is our largest contributor to CO2 in the atmosphere. Another place to reconsider present policies. With great concern,

Deborah Andrew deborah.w.andrew@gmail.com

RE: 2012 LNG Export Study

To Whom it May Concern:

I am sick and tired of the oil and gas lobby destroying the planet – this has to stop, and it has to stop NOW. We need to retool industry for clean, green energy – and do it NOW. In fact, the clean energy industry is the only thing that will save the US economy. Did you know that the economy moves in a number of cycles, including the 40-60 year Kondratieff wave, which rises and falls on technology? The Information Technology age (which replaced the automobile age as our economic engine) began in about 1970 (as car manufacture diffused to other parts of the world) – and IT kept the US on top economically for over 40 years. Now, microchip technology has diffused. If we don't focus like a laser on a new wave of technology (which, given global warming, MUST be clean energy) other countries, including China, Brasil and Germany, will lead the new Kondratieff wave and US global economic power will fade even more than it already has. CLEAN ENERGY NOW. Thank you.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Pilar Goldstein-Dea
