RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Myron clark
3368 Circle Dr.
Gulf Breeze, FL 32563

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking. The process and the effect on the planet due to unknown chemicals put into the earth is a health hazard to not only people but the country. The need for silica sand is ruining Wisconsin and Minnesota countryside by mining the bluffs that took millions of years to create and only years to destroy. We do not need fracked gas at such a high cost.

Sincerely,

Roseanne Grosso

RE: 2012 LNG Export Study

To Whom it May Concern:

Our goal is to become energy independent. If we have too much natural gas, stop fracking, slow down production, and keep it for the future. Exporting it is not even close to being worth the disadvantages of the havoc Fracking wreaks. Fracking solely for the profit of export is NOT WORTH the damage it causes. Frackers should be 100% liable for ALL health and environmental damage.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Cardwell

To Whom it May Concern:

INTERESTING HOW THE FOSSIL FUEL GUYS ARE ALL BUYING UP AQUIFERS, SO THAT WHEN THEY DESTROY OUR GROUND WATER, THEY CAN SELL US THEIR WATER. WE ARE SUCKERS TO THEM AND NEVER LEARN UNTIL IT IS EITHER IN THE 11TH HOUR, OR TOO LATE. LETS WAKE UP AND STOP THESE PEOPLE FROM RAPING OUR ENVIRONMENT FOR MONEY AND THEN SELLING US WATER AFTER THEY'RE DONE! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Julie Mundt

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tobin Jeffery

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lisa Jacobson

RE: 2012 LNG Export Study

To Whom it May Concern:

I remember almost 30 years ago when Motorola was pumping a solvent they used called TCE trichloroethylene underground. Since then, they have payed millions to clean up the groundwater. How can gracking not be doing the same thing—polluting our groundwater. Allowing natural gas companies to ramp up the fracking to totals where the greedy companies can export the gas at the expense of poisoning our communities in nonsense. So have some sense and don’t allow exporting of natural gas!!!! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Pat Edley

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Brenda Bull

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Simone St Clare

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking has been promoted as the way back to national energy independence. Fracking is a clandestine process the industry has consistently refused to become "clean" about. Notoriously damaging, irreversible, unforgiving, and simply unsafe to the environment, fracking should be a prohibited as an acceptable technology. No case has been made for our need to rush back into national energy independence. If there were a need, the industry would have spelled it out by now. Instead the industry relies on a knee-jerk head-nodding public compliance. It would be adding insult to injury if the industry ruins our environment to sell fracked gas on the international market. Please - NO to fracking and NO to opening international markets for it.

RE: 2012 LNG Export Study  
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jill Nelson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susannah Abbate

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. The world cannot tolerate the damage to the climate that would be caused by the process of preparation of the gas for export! YOU MUST STAND UP TO THE FOSSIL FUEL INDUSTRY and deny all applications to export natural gas!

Sincerely,

Janet Laird

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

B Daigle
124 Downing St
Lafayette, LA 70506

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. When will the environmental equivalent of the Newtown massacre happen? Those of us paying attention see them over and over and we urge that the president wake up and draw a line in the sand, as he is doing (to his credit) with assault weapons. It is time for bold action on the part of President Obama. Thanks, Tim Shields

Stand up to the fossil fuel industry and deny all applications to export natural gas. Let’s count ALL the costs of the extracting, exporting and burning this product! From the citizens along the routes to the water near the wells, from the careless track record of the industry to proven costs of climate change, this is the wrong direction for our country. Let’s put all our energy into earth sustainable processes.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ola Edwards

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Also, enact strict standards which state governments have not enforced and hold companies invested in fracking accountable. Accountable to the towns, the people, the land, water, and communities they destroy. Fracking is NOT the answer. Invest in renewable technologies and tap into brilliant minds. That is how our country will not only succeed, but lead the world.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Craig Reppe

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Brent Bray

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I have seen the fracking industry steamroll through Pennsylvania, where I live. I have seen a legislature and Governor give sweetheart deals, via tax breaks and public safety and environmental regulations being relaxed or eliminated, to the industry. Allowing more permits will accelerate the actions of this industry that is poorly regulated and a threat to the environment and future generations' health.

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Alicia Johnson

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

George Lakoff

RE: 2012 LNG Export Study

To Whom it May Concern:

The technology is not mature enough to conduct safe fracking operations. The industry is pushing to go ahead to the profit-making stage without proper diligence regarding safety and adequate disaster mitigation protocols. The consequences of aquifer contamination are severe and long-lasting. We must act responsibly and demand maximum safety before allowing increased production to proceed. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Andrew Pober

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Fennelly
160 Chatham Rd
Asheville, NC 28804

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

To Whom it May Concern:

Let's put our efforts into sustainable, renewable forms of energy and stop the devastating impact that fracking, burning, and exporting gas has on local communities, our economy, and on the climate. Please do not allow fracked gas exports to increase the scale of and demand for fracking in the United States. Stand up to the fossil fuel industry and deny all applications to export natural gas. It's time to turn away from our old polluting ways and start on a new path that will protect our climate and environment. Thank you for your consideration.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Calloway

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Debra Ouellette
1350 King Ave Apt 102
Columbus, OH 43212

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Justin stricker

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Edward Galinis

RE: 2012 LNG Export Study

To Whom it May Concern:

PLEASE do not allow this. The Fracking process needs to be is better monitored, not given a ticket to go full speed ahead. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. AND there will be an increase in pipelines, as I have seen close to home. Our local fight with TRANSCO has proved to be unwinnable. They are buying and taking land and homes that the locals DO NOT want them to have-and even with a strong grassroots efforts their voices have gone unheard. FERC has done close to nothing to help them and seem to be working FOR the gas companies with no regard to the property owners. Please Mr president- do not allow this profits over people practice run rampant!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Brenda Barton
1533 Carroll Ave
Ames, IA 50010

RE: 2012 LNG Export Study

To Whom it May Concern:

This is outrageous! Not only is fracking a toxic threat to American communities and the climate, but now you’re allowing natural gas companies to exploit Americans to ship this "clean" energy overseas? All to maximize profits for companies that will continue to exploit Americans for as long as there is a penny to be made? WHATEVER HAPPENED TO THE ENVIRONMENTAL JUSTICE MOVEMENT? This is a glaring example of the rich oil companies taking advantage of poor Americans willing to sell away property rights for a fraction of what the oil companies will profit because poor Americans need the money so desperately. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study  
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jim beene

To Whom it May Concern:

Fracking is a toxic threat to American communities and the environment. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States. Do not encourage more widespread usage of this natural gas extraction method unless it can be proven to be safe for people living near the wells, and be proven not harmful the environment. It’s the 21st century, we should be investigating alternative energy sources, not stepping up global reliance on limited fossil fuels.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Protect our environment, please!!! Amrita M. Salm, Ph.D. Carpinteria, CA 93014

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Christopher Murney
94 Lake Road
Salisbury Mills, NY 12577
U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It is interesting that the oil industry think they have to have subsidies so that they can produce more fuel for this country and then instead just sell it overseas for a better price to line their pockets even more. I agree with President Obama that it is time to stop subsidizing them also.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Monica Jones
62 Pine Brook Rd.
Lincoln Park, NJ 07035
U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

It’s like a bad joke: What’s the difference between Sarah Palin & Barak Obama? Nothing. That’s the sad vision when we hear the President chanting Drill, baby, Drill in his elliptical way. Please reject the entire notion of exporting fracked gas. We need LEADERSHIP, Mr. President. Not more concessions to rogue fossil fuel industries which are wreaking havoc with our planet. Wake up & smell the future burning for God’s sake. Let’s get some government whistleblowers to reveal just how corrupt fuel industries are in buying their way into the American landscape. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Qayyum Johnson

RE: 2012 LNG Export Study

To Whom it May Concern:

Barack Obama, I'm a New Yorker, and a supporter of all your new energy initiatives. Fracking is a terrible, destructive and "quick" solution – we need long-term conservation of our fragile eco-system. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Am I living in a new Appalachia or a third world country? My part of New York State will be ravaged by gas wells, air and water pollution, increased crime, and a host of other problems so that natural gas can be sold overseas. This makes the stated goal of U.S. energy independence a cruel hoax. Even if the drilling could be done cleanly and safely, why aren’t we reserving U.S. energy resources for domestic use??!! No fracking! No fracking! No Fracking in New York State!

Sincerely,

Larry Stein

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jackie Hall

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Orlando Reyes

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. How dare the Dept. of Energy lie about it. Just like the Ground Zero health fiasco? There is no reason to keep pushing fossil fuels. I realize to suddenly stop might be a serious problem for the world economy but even 2 more years without serious reductions means further insults to the world climate and our American citizens. I've come to realize the petro-fuel industry has only one thing in mind: Live like Kings today while destroying the world for future generations. Cancer, autoimmune diseases, and a wealth of other disabling health conditions are connected to the failure of the petro-fuel industry to stop exploiting humans. I haven't yet mentioned the worst—erratic global weather. We just might be in the last few years of life as we've known it and these people don't care or are lying to themselves as they've lied for years to American. The polar bears are drowning but these companies are still up there spilling sludge and trying to rescue their drilling platforms that keep breaking apart. I see regular people changing their lifestyles while these guys who are the biggest problem just keep on going. Stop them and save us while it can be done.

Stand up to the fossil fuel industry and deny all applications to export natural gas. Not good, not safe, not appropriate!!! Our country can do much better. I can attest to needing to protect our climate from this. As if chem trails weren’t bad enough, now let’s add this burning to the air. Really!! Keep adding up the nuclear reactor places to dump.....when are we going to live in a sane and safe United States where we earn good health and prosperity by respecting the earth. Hmmm maybe we would not need sooooo muc insurance!!! Respectfully,

Laurel Petersen

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lynda Carson

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Here in Louisiana, we are seeing what fracking and messing with sending bad things underground can do to our land. We have a sink hole that is stilling growing and growling in our state not far from Baton Rouge. The questions and answers are still unknown about this disaster, but one thing we can know is that it will not be good

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. If you decide to push through with this absurd, dangerous plan to export gas, then American citizens should be entitled to refund checks similar to Alaska. It is not right to ship our natural resources overseas for a short term economic gain. Think about our grandchildren and great grandchildren and all future generations. Profits for the few do not make sense.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jessica Plumer
32 Beechstone #3
Portsmouth, NH 03801

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Adele Shakal
119 E. Calaveras St.
Altadena, CA 91001
U.S. Department of Energy

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Tivol

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gayle Hebert

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Homeowners who live near fracking operations have their drinking water tainted by methane and other toxic chemicals, while the companies behind the fracking operations refuse to admit that their operations are the cause of toxic drinking water. There are also reports of these toxic chemicals in the air and in the bodies of Americans living near these operations. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Such increased scale would risk the health of millions of Americans if these operations start. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Angela Bivona

RE: 2012 LNG Export Study

To Whom it May Concern:

This is a disgrace to your presidency. I thought science was going to be used for good. Instead of sending money to promote Dems in the next election, I am sending money to the Green party. I am sick of Dem Party sellouts. I won’t stand for it any more. FYI, we gave our full allowable contributions to Barak Obama and thousands more to other vulnerable Dems. NO MORE - the planet and our food and water can’t take any more abuse. You are behind the curve and about to get steam-rolled. Watch the next election. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bryan Milne

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It appears that Greed precludes any common sense. We can no longer pretend that the environment of this planet can sustain more assaults on the air we breath, the water we drink, and the land that we grow our food on. The planet is already in a downward spiral due to the callus way we have mismanaged our environment because of Greed. If we continue on this path we will be unable to help the planet that we depend on for our very existence. I assure you the planet doesn't care what you legislate or make into law, but we will all pay the price when we cannot breath the air, drink the water, or grow our food. Thinking is not only allowed, it is Mandatory.

Union City, NJ 07087
The fossil fuel industry has yet to prove themselves inherently responsible stewards of the land, water, and air affected by hydraulic fracturing. They are only reactive and attentive to disasters or heavy fines. Therefore, until and unless: 1) Gas companies provide a complete listing of all chemical compounds used in the full process (including by-products, produced water, etc.) as that 'proprietary trade secret' excuse is a laughably transparent ploy; 2) There is a strict, solid, funded and staffed, nationwide regulatory system set up for continual (non-company) on-the-ground monitoring/inspection/reporting of existing and future wells operation, including allowing for heavy penalties for all environmental spills, leaching of contaminants, mishaps, etc., plus responsibility for stress on existing & new infrastructure (roads, bridges, municipal needs, etc.); 3) until land owners are not lured into gas leases without both truthful risk assessment/information and appropriate company recompense for injury to life, limb and their property; 4) until there is provided a non-biased, scientific understanding of the effect of multiple drills on the geologic substructure in any given area (think of the analogy of osteoporosis or Swiss cheese: too many voids/holes, the structure becomes unstable--then look at Ohio's issues.) 5) until there is an understanding that groundwater exists horizontally on multiple levels, and once contaminated, can leach in multiple directions, not to mention the effects of exposed chemical pits/holding tanks have on local air quality. If even these few common sense, but critical, items cannot be undertaken, then we have no business opening the hen house even wider to the wolves. Though I acknowledge this industry is a generator of many needed jobs, until proven otherwise, fracking remains a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. - Wendy Van Der Bogart, NYS Registered Landscape Architect

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Leonard Robel

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. If you truly want a healthy public, it won't happen without clean water.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking threatens to poison the water of millions, if not hundreds of millions, of Americans for generations to come, as well as being a major contributor to climate change due to massive gas leaks. If fossil fuel companies can export the fracked gas to foreign countries, that will greatly increase the incentive to poison people and ruin our climate i.e. cause mass manslaughter. Stand up to the fossil fuel industry and deny all applications to export natural gas. Otherwise, the blood of all of the people who die will also be on your hands.

Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking is NOT safe at all, it will destroy our future water reserves for sure, any leak at any place along the fracking pipe will seep into ground water, and the pressure the pipe is under with toxic chemicals being pushed through it to "frack" does makes for leaking along the pipe, and water being contaminated. The chemicals being used are so very toxic they wont even name them, and for some reason don't have to name them. Please protect our future water supply, do not go for the greed of the energy companies who only think of today and their own pockets, not the country or its future.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Armida Cook

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Instead encourage the building of pipelines and infrastructure in our country to deliver and use the gas here. Don’t allow new wells until a delivery source is established and stop the wasteful burning off. Make them have a plan before they go drilling.

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We have been told we need to accept all the damage of fracking because it is important to make us less dependent on foreign fuel sources - so how does selling off the fuel that gets obtained by fracking, and ruining more of the US, decrease our dependence on imported fuel??

Sincerely,

Conleth M. C. Crotser MD

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I am afraid that fracking can destroy our water reservoirs and in Michigan damage the Great Lakes and in land lakes which are already at low levels.

Sincerely,

Barbara Webster
26300 Farmington Rd
Farmington Hills, MI 48334
U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Export fracked gas? NO WAY! This is about money not the good of our country. We will never be energy independent if we export our natural resources. What's worse is the devastating toll increased fracking has on our environment. And, has anyone considered that emptying the earth of oil, gas, and coal is setting up an unnatural disaster when the earth collapses due to the empty space left when so much has been taken the earth can no longer hold together. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Samuel Sandeen

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mendi Mendez

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Walter Dudek

RE: 2012 LNG Export Study

To Whom it May Concern:

I live in the middle of the fracking industry – Marshall County, West Virginia. A beautiful close-knit rural community has been devastated by fracking. Apparently there are no regulations. Our roads are decimated, our quiet is shattered by drilling and traffic, and I now find my peaceful 95 acres – indeed my entire community – in the middle of an industrial zone. I had absolutely no say in this. I am not profiting by one cent – only paying the bill (as a taxpayer) for broken roads and frequent industrial accidents. IT'S NOT FAIR, AND IT'S UNAMERICAN. These people aren't making the US energy independent. They are raping and pillaging the environment as quickly as they can for PROFIT. The ultimate insult is the gas industry selling what they've extracted from our land to sources overseas. IS THIS THE AMERICAN WAY?? I cannot begin to express my disgust with my local, state, and federal officials. PLEASE do something to help the people who live in these gas zones – and the people of the planet who will pay the costs of ever-increasing use of fossil fuels. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Janine T

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jonathan Pickett

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Loisel
1615 Charleston Walk
Atlanta, GA 30316
U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fresh Water is an incredibly valuable resource and Fracking is a direct threat to the safety of fresh ground water. The costs to communities that have their ground water contaminated by fracking far exceeds the potential value of any crude oil extracted by fracking. The Environmental Protection Agency was established because big industry couldn’t be trusted not to contaminate our water. Just because it happens underground and not in a waterway doesn’t make fracking any less of a threat to our environment. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Shawn Hoose

RE: 2012 LNG Export Study

To Whom it May Concern:

With climbing gas prices the last thing our country needs is to see prices continue to climb because of exportation. Look at the situation with diesel, we moved to ultra low sulfur which allowed exporting and the price skyrocketed, increasing the cost of all goods and food in the country. Our economy can not support this anymore. DO NOT ALLOW THEM TO EXPORT Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michael Kreider
2150 Clay St.
Lima, NY 14485
U.S. Department of Energy

Stand up to the fossil fuel industry and deny all applications to export natural gas. How can ANYONE SAY, they love their country or are "patriotic" if they allow it to become poisoned by all of this and to add to the horror; you would EVEN consider exporting out...This is so insane. Why is this even being considered; when so much of our environment is SO fragile NOW due to greed & terrible “management”. We MUST STOP this destructive behavior right NOW and try to turn back what we have helped destroy.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Isaac Robitaille

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jennifer Larson
P.O. Box 406
Basin, WY 82410
U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking allows corporations to inject whatever chemical cocktails beneath our communities without disclosing what they contain or proving their safety. Furthermore, the safety of the practice as a whole is unproven. Allowing export of gas obtained this way would dramatically increase the incentive for fracking in the United States before we have properly observed and evaluated its sustainability. Giving it the green light to scale up is like writing a blank check to a drug addict - they are not likely to self-regulate until they've destroyed themselves or someone else. And even then, they won't want to stop without someone else's intervention. We must be the voice of reason. For now, for the safety of our nation's communities, we must deny all applications to export natural gas.

Sincerely,

Evan Gridley

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Alexander Glussky
6 Woodward Drive
Bridgewater, NJ 08807

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Get the money out of politics and political decisions! Stand up for all Americans and our environment! Do not sell us out!!

Sincerely,

Pamela Wall
529 N 7th St

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. The damage fracking causes is already immense. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. People are already poorly affected by the fracking process; their health and the stability of the very ground they walk on are at risk. Do not let the fossil fuel industry export and increase the demand for natural gas.

Sincerely,

Monica Plourde

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Walker

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dorothy Currier
430 Tirrell Hill Rd

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. If the logic of allowing fracking, at all, is to help the US get away from foreign oil dependency, it doesn't make any sense for us to allow the fuel that we have, to be sold to other countries. The risks to the earth's environment, with either importing or exporting fuel, are another reason we shouldn't allow exportation of fracked gas. PLEASE stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jocelyn Patterson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. I will not go so far as to say that all applications to export natural gas should automatically be denied, but that should be the default position, with approval only in exceptional circumstances.

Sincerely,

Brian M. Scott

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Hans Beerbaum
5881 Roblar Rd.
Petaluma, CA 94952

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Brian Luenow
2134 35th Ave
San Francisco, CA 94116

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Daniel Dubbs
4 Dogwood Road
Schuylkill Haven, PA 17972

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Extracting this Natural Gas is as bad or worse than Natural Oil, or Natural coal. They all occur Naturally underground. They all cause pollution when we extract them, transport them, or burn them. The result is the destruction of our environment, and it's inhabitants. Why would we allow any of these industries to continue to exist, to our detriment, for exportation???

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and climate. If we are going to allow fracking then I want the 2005 clean air act to be amended to not allow fracking companies immunity. I want local communities to be able to decide if they want fracking and to set the guidelines of extraction, water safety, monitoring/testing, and transport. I want taxes on this resource to go to development of sustainable renewable energy sources and education/job training to the communities from which it comes. Again most importantly!!!!!!! Protect the water!!!!!!!!!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Shawn Abrahamson
7377 N Rogers Ave

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nicole Silva

To Whom it May Concern:

I live in Weld County, in Northern Colorado. It is known as one of the biggest agricultural regions, yet our farmers facing this continued drought should have access to water over companies fracking. Especially, if gas from said fracking is going to be sent over seas! Support the Americans, the locals, not corporate profits. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. RE: 2012 LNG Export Study

To Whom it May Concern:

Why export petroleum when we are trying to reduce our dependence on foreign oil? Why encourage big oil to pollute our air and water and cause more Global Warming when we should be moving as fast as possible to wind and solar? An accident at an LNG shipping facility could be a huge disaster and given big oil’s safety record recently not a good bet. Why take the risk of building more ticking bombs when there are so many good reasons not to? Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jessie Diermier
P.O. Box 1444
Loomis, CA 95650

The Cornell University study titled Methane and the Greenhouse-gas Footprint of Natural Gas from Shale Formations found that the amount of methane escaping into the atmosphere during shale-gas production due to venting and well leaks is at least 30 percent higher than that released during conventional natural gas production, Yates said. Over a 20 year time span, the Green House Gas (GHG) footprint for shale gas is up to 43 percent higher than conventional natural gas, 50 percent higher than oil and 20 percent higher than coal for the same amount of energy produced by each of the three sources. Huge amounts of water are required to extract gas and the methane produced by fracking triggers climate change. The EPA estimates it takes 70 to 140 billion gallons of water to fracture 35,000 gas wells. The number of gas wells planned by New York is double that amount. Water used for hydrofracking depletes water supplies and impacts plants, fish and animal life. Large consumptive uses of water has other consequences. Water absorbs large amounts of heat; regulating the earth's temperature. The earth is heating up. Extreme weather, heat, drought and storms are affecting highways, bridges and rail lines; wildfires raging, crops withering, nuclear plants shutting down, cattle dying, and thousands of fish killed. Changing weather patterns are harming fruit crops and farm workers are being laid off. Farming costs rise and revenue drops. When its hotter, cows need more water and the cost of feed goes up. Tax dollars are used to combat damages. Lack of water causes food shortages and drives up prices. Gas companies are digging ponds, drilling water wells, trucking water, or paying for it. The higher costs of bringing in water will make gas prices rise. As our water supplies diminish, water will be turned into an even costlier commodity. Without water everything quickly passes out of existence. We have a moral responsibility to protect water. Ban fracking, the fossil fuel industrys latest extreme energy extraction method and protect what matters most - our children, our water and our air. PS-our geology should not be allowed to be used as the dumping ground for the multinational gas industry. Respectfully, Cheryl Cary 1 Kimberlee Drive Canastota, NY 13032 315-440-5758 Cherylcary1@gmail.com When the well runs dry, we will know the worth of water. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Sincerely, Cheryl Cary 1 Kimberlee Drive Canastota, NY 13032

RE: 2012 LNG Export Study

To Whom it May Concern:

The dangers of fracking to our local communities is still to be determined and poses serious questions. I fail to understand why we would put the health of our communities in possible harms way to EXPORT natural gas?? I am disturbed by the thought that we would squander a resource that WE might need in the future and that we might, at some future date, be able to extract more safely for the profit of a few. Please, please deny permits for exporting our natural gas.

Sincerely,

Susan Compton

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. From the massive natural disasters to the record setting heat, it is clear out climate is rapidly changing. As we know that carbon dioxide is a greenhouse gas, it seems all too obvious that the massive amounts we put into the atmosphere by burning fossil fuels are responsible. It is time to move away from these sources of energy as fast we can and invest heavily in cellulosic fuels, biotechnology, and renewable energy, while encouraging the rest of the world to do the same.

Boulder, CO 80302
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Linda Porter

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Chris Bigenwald

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. As an Engineer and scientist I understand that the oil & gas industry is completely lacking current standards for safety and quality control to adequately protect the environment and citizens near these fracked wells. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mike Sellers

To Whom it May Concern:

It would be very interesting to see an energy audit that looks at the cost to produce one "unit" (how ever that is defined) of frak-derived energy vs. an equal "unit" of solar or wind or geo-thermal or energy saved through conservation. It’s time to call the global profit-pigs to the carpet and make them justify their rape of this earth.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Exporting would give countries that our jobs went to, more of an advantage when we can keep jobs here, when we should have the advantage and bring back jobs.

Sincerely,

Stanley Lisk

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Environmentally, exporting natural gas does NOT support a transition to a clean fuel. The drilling process is a dirty process with millions of gallons of toxic back flow waters needing disposal, fracked water is dead water. The chemicals used are cancer causing, the deep brine waters with radioactive deep earth waste are not being disposed of correctly, contaminated drinking water is a huge problem. No one can sell a home without water. Sucking the last fossil fuels from our nation is too great a cost to our future generations. Now is the time to support a transition to sustainable non fossil fuel. Keep this last fossil fuel in the ground, the methane when not flamed is 5 times the CO2 of coal burning. The methane is leaking from wells, pipes, drinking water, spewing from new wells migrating to unchartered wells from yesteryear. The source of the Department of Energy information is questionable. The very persons in the industry are reporting to the industry. The environmental consequences of increasing unconventional drilling for natural gas are too great. We must reject exporting natural gas not encourage more devastation to our citizens. This decision to export will do much more harm than good. Do not allow exporting gas to move forward. Concentrate on all of us in Pennsylvania who have contaminated water, gag orders for doctors, pay offs by the gas industry, corruption in our state government. Protect us as you hired to do and clean up this mess created by Marcellus Shale drilling! I urge our country to stop this unconventional drilling now and do the real studies necessary to protect our water, land and air from this dirty drilling.
