

Dear Mr. Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

David Christensen

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Wise Skillman

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our

country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Andrew Salas

I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

I also happen to be a government employee looking at coping with loss of wages (through furlough) because of mis-management of government income through frivolous spending. Creating more jobs allows the government to take a percentage in income taxes, in case you aren't aware the sort of wage earners we are talking about here are highly skilled in metal trades and earn high income. Then there is the systems effects for service industry partners adding casualty control, fire prevention, computer automation, security monitoring ,etc that benefit from developing facilities to handle the product. Please hear my concern, it is not a complaint-it's a plea to do what's best for all of us.

Sincerely,

Kipling Brumm

Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Susan Ackeridge

-----

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Allan Krenek

Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Mary Hager

-----

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Linda Rothenhoefer

Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

richard frank

---

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

David Large

Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

jack kennedy

-----Dear Mr. Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

JUDITH MARTIN

PO Box 1435

-----Dear Mr. Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

PO Box 59001

-----Dear Mr. Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Marvin Miller

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Dave Marino

5803 Adelaide Dr

-----Dear Mr. Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Bill Heckman

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make

the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Darryl Frank

-----  
Dear Secretary Chu,

Now that the Department of Energy (DOE) has released its study on the macroeconomic impacts of U.S. liquefied natural gas (LNG) exports, I believe it is imperative that your department quickly approve all pending export applications for non-free trade agreement countries. As you know, the analysis concluded that, "In all the scenarios analyzed in this study, NERA found that the U.S. would experience net economic benefits from increased LNG exports." This conclusion adds to a mountain of recent studies finding that the benefits of exporting LNG would exceed any associated costs.

Granting permit approval for increased U.S. exports of our abundant natural gas resources is an economic winner for the American people. Each project that is built would be a multi-billion dollar private sector investment in the U.S. economy that will create jobs, stimulate economic growth across many sectors including manufacturing, and reduce our trade deficit. Construction and operation of a single new LNG project could create as many as 48,000 new jobs in design, engineering, construction, and operation, which in turn translate into hundreds of millions of dollars in new wages for American workers. Additionally, total local, state, and federal tax revenue created by a single facility could exceed \$4.5 billion over the 30-year lifespan of an LNG export project.

It is also clear that the United States has an abundance of natural gas, which will allow us to seize the opportunity to increase exports while simultaneously increasing domestic use for power generation, manufacturing and transportation. Proven reserves of U.S. natural gas have increased dramatically in recent years, and experts now estimate that the United States has almost 100 years of supply at current levels of consumption. Given this abundance, the recent DOE macroeconomic study indicated that the United States can export gas without significant domestic price impacts, as the exported gas would largely come from increased U.S. gas production, creating more jobs and economic stimulus.

Furthermore, LNG exports are in the geopolitical and environmental interest of the United States. Becoming a reliable global supplier of natural gas will allow us to support our NATO allies in Europe with

a stable and reliable source of natural gas, as well as provide needed fuel for our long-time allies in Asia, such as Japan and Korea who depend on LNG imports. Similarly, the global environmental benefits of increased natural gas use cannot be understated. Natural gas emits roughly half the carbon dioxide emissions of coal when burned for electricity, and little to no emissions of sulfur dioxide, nitrogen oxides or particulate matter. The U.S. Energy Information Administration recently determined that we have reduced greenhouse gas (GHG) emissions in the United States to 1992 levels specifically because of the increased use of natural gas. By exporting LNG, the United States will be providing the world with access to a source of cleaner and reliable energy that can help reduce global GHG emissions.

It is clear that LNG exports to America's trading partners are in the public interest. Pending permit applications for LNG facilities should be approved without delay so we can take advantage of this unique American opportunity to create jobs, boost the economy, and reduce our trade deficit, all while continuing to expand domestic use of this clean-burning source of American energy.

Sincerely,

Laura Cooper

-----

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
JOHN CORMIER
