Subject: export of LNG

Dear sirs:

I am adamantly opposed to the export of the USA's natural gas. We risked our own environment under the promise that fracking would create an opportunity for energy independence. Given that, why would we now decide to export this commodity? It makes no sense other than to enrich the energy companies. It will not help us obtain energy independence.

Please deny permits requesting permission to export our LNG.

Sincerely,

[REDACTED]
