Subject: Liquified Natural Gas Export Terminal Permit Request

Categories: Blue Category

I am writing to demand that the permits for LNG export facilities be denied. Friends and neighbors of mine have suffered damage to their water supply and home values due to the extraction of natural gas. There are a few who benefit economically at the expense of many. In addition, methane is released into the atmosphere as a result of this process. Methane is a greenhouse gas far more dangerous than carbon. We should be moving full bore into a 21st century energy policy based on solar, wind, geothermal and other safe technologies not continuing a 19th century plan that depletes our fresh water supply.

Thank you,

Jay Sweeney
