Dear Mr. Steven Chu:

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,
Eugene Intrieri

This is a no brainer, please allow natural gas exports

Sincerely,
Julia Ladet

---------------------------------------------------------------------------------------

Dear Mr. Steven Chu:

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was definitely flawed.

The creation of jobs is just more corrupt Republican OIL & FINANCIAL corporate MONARCHY bull$hit! Nothing more, nothing less. The REAL DEAL for JOBS IN THE U.S. is to convert ALL HOME & AUTOMOBILES to Non-Pollutant NATURAL GAS and stop using the FOUR TIMES TOO HIGH PRICED GASOLINE that the American People are being forced to buy. They can't even afford food for their children because of the corrupt Republican OIL & FINANCIAL corporate MONARCHY that has MADE SLAVES of the American People in their very own country. The Natural Gas belongs to the American People, NOT TO THE CORPORATES!

And ultimately, we should have ALREADY BEEN CONVERTING to the DAMN NEAR FREE Magnetically-Driven Electrical Energy for BOTH HOME & AUTOMOBILE. We have THREE VIABLE PATENTS by Howard Johnson in our U.S. Patent Office that have been there a long, long time for this form of energy which is 100% NON-POLLUTANT, WOULD ELIMINATE ALL MASSIVE POWER OUTAGES because each system is INDEPENDENT of each other and would NOT ONLY CREATE MILLIONS OF JOBS HERE AT HOME for marketing, manufacturing, installation and maintainance that would pale any job creation by shipping THE AMERICAN PEOPLE'S VERY OWN NATURAL GAS OVERSEAS.

The Republican OIL & FINANCIAL corporate MONARCHY'S UNCONTROLLED CAPITALISTIC GREED HAS ALREADY GONE WAY TO FAR! IT'S TIME FOR CHANGE, AND THAT TIME IS NOW. Not later, but RIGHT NOW!

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.
I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,
Ritchie Steed

Dear Mr. Steven Chu:

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Grizelda Baker

Dear Mr. Steven Chu:

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.
Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,
Michael Fragale

Dear Mr. Steven Chu:

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,
Andrew Rebich

Dear Mr. Steven Chu:

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully agree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

I am an Energy Citizen, and I know those with a financial gain do support this item. I however only support it if we carefully examine the impact this will have on all our aspects of life, climate, environmental, polutions, fracking problems etc. and only and only after that evaluation is done do I support this.

Eliminating barriers to trade may result in a catastrophe as the banking industry has put us in. We need responsible regulations by competent people. SEC was warned many times by the Bernie Madoff rip off and did nothing and no one went to jail. Shame on our government for allowing this.

Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,
Robert Speas

Dear Mr. Steven Chu:

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.
Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,
David Howarth

Dear Mr. Steven Chu:

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

This is a total no-brainer...EXPORT...MAKE money by the bucket...get moving on this...!

There is a lot left for use here in the USA...at no xtra cost, like Dow in Texas...lots!

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,
William Presslor

Dear Mr. Steven Chu:

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.
Sincerely,
Ray Hall

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,
Thomas Gray
Dear Mr. Steven Chu:

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,
Ryan Lowry
country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

Sincerely,

Richard Bell
I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,
Gerald Roberts

Dear Mr. Steven Chu:

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Norwood McDaniel
country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,
maxwell friedlander

Dear Mr. Steve Chu:

In response to Representative Edward Markey's comment that was submitted on December 14th, I would respectfully disagree with his contention that the liquefied natural gas (LNG) export study commissioned by the Department was flawed.

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting LNG found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Please make sure you get the facts and don't react on the emotions of global warming. Over the years energy has become more efficient and natural gas is a clean abundant source that mainly located in the US and Canada. Let's utilize our natural resources to our advantage. Business will find a way to get around, and unfortunately in this case it would be other countries using dirtier technology (like oil). Many green technologies are not advanced enough to make a major play and hopefully one day they will. By blocking things like this and the keystone pipeline actually cause more harm to the environment. In the case of the Keystone pipeline being blocked, inefficient rail cars have been utilized polluting far more than the pipeline would. If your worried about spills to the environment, make these companies take out expensive insurance and have them pay massive fines. That way there is not only an altruistic and image approach to help the environment, but there will be an economic benefit. Thank you for reading my letter.

Sincerely,
Patrick Salemo

---------------------------------------------------------------------

Dear Secretary Chu:

As a member of the oil and natural gas industry, I want to express my support for approving liquefied natural gas (LNG) export permits and address some of the points brought up in the comment from Representative Ed Markey.

Among other things, Congressman Markey asserts that investment benefits would not accrue widely to Americans. I disagree. As a 2011 study by Sonecon found, millions of Americans own oil and natural gas holdings through mutual funds, pensions and 401(k)s -- while corporate management owns less than three percent of the oil and natural gas industry.
Rather than delay the export of LNG as suggested by Congressman Markey, we should approve these significant projects so that the nation can enjoy the benefits. As a nation, we have an abundance of natural gas. Industry advancements in hydraulic fracturing and horizontal drilling have led to a dramatic increase in the estimated recoverable shale gas resources located in the United States.

Concerns about domestic natural gas prices rising seem to be overstated. Recent studies such as the May 2012 Brookings report, entitled 'Liquid Markets: Assessing the Case for U.S. Exports of Liquefied Natural Gas,' state the price impact of 6 bcf/day of LNG exports would range from between two and 11 percent (12 and 64 cents). The Brookings study concludes that global markets limit how high U.S. natural gas prices will rise, showing that LNG exports would have a minimal impact on domestic natural gas prices.

In addition, by becoming a larger LNG supplier to our allies abroad, we could create tens of thousands of new jobs here at home. The study commissioned by DOE states the following:

'Across all these scenarios, the U.S. was projected to gain net economic benefits from allowing LNG exports. Moreover, for every one of the market scenarios examined, net economic benefits increased as the level of LNG exports increased. In particular, scenarios with unlimited exports always had higher net economic benefits than corresponding cases with limited exports.'

The domestic job creation potential is great: an IHS report for ANGA on the economic impacts of shale gas estimates that for every 1 bcf/d of shale gas production, approximately 32,000 total jobs are supported throughout the economy. Plus, the additional gas production associated with exports would generate billions of dollars annually in much needed federal and state government revenue.

In addition, approving export permits would allow for flexibility to export in times of market imbalance, which helps the industry operate efficiently, maintain production and employment levels, and enhance U.S. energy security.

In our still fragile economy, it is crucial to approve LNG export permits to create jobs, support the American economy and increase energy security.

Sincerely

Doyle Whitesel

---------------------------------------------------------------------

Dear Secretary Chu:

As a member of the oil and natural gas industry, I want to express my support for NOT approving liquefied natural gas (LNG) export permits.
ALLOWING LNG EXPORT WOULD BE AN EXTREMELY SHORT-SIGHTED MOVE. WE WOULD ATTAIN A STATUS OF THIRD WORLD COUNTRY - EXPORTING FINITE NATURAL RESOURCES WITHOUT BENEFITING ENTIRE ECONOMY.

LOOK WHAT IS HAPPENING TO PAPER INDUSTRY. US IS EXPORTING WOOD CHIPS AND PAPER MILLS ARE CLOSING. WHAT DO YOU THINK WHO GETS THE EMPLOYMENT.

Current level of gas exploration and production offers full employment among oil and gas field workers. Massive LNG export would ask for increased production of natural gas that is in a limited supply. Gas industry will have to hire some temporary workers, few regions would see lower unemployment for a period of time. Likely, we would see a wave of oilfield accidents due to hiring inexperienced people without sufficient supervision. In mean time price of gas will go up for consumers and chemical industry. While few people would see benefits of LNG export the country will overall suffer.

KEEP AMERICAN NATURAL GAS IN AMERICA

Natural gas is a major feedstock for chemical industry. Convert gas to products that can we worth 10 times or more than the gas by itself.

Congressman Markey, is absolutely right, we should delay or not go forward with LNG export. The abundance of natural gas is a myth. Congress must think how we will live in 20 50 years from now not just in this term.

M Pakulski
Houston, TX

Sincerely

Mark Pakulski

Dear Secretary Chu:

As President of the Albuquerque Petroleum Association, and a member of the oil and natural gas industry, I want to express my support for approving liquefied natural gas (LNG) export permits and address some of the points brought up in the comment from Representative Ed Markey.
