

Secretary Steven Chu
2012 LNG Export Study
U.S. Department of Energy (FE-34)
Office of Natural Gas Regulatory Activities
Office of Fossil Energy
P.O. Box 44375
Washington, DC 20026-4375

Dear Secretary Chu:

As a homemaker with a spouse who works as a corporate trainer, I probably would not be affected directly by the exportation of liquefied natural gas. However, I do believe that if it is allowed, it will benefit our country as a whole by creating jobs and giving a jump-start to our failing economy. This proposal should be implemented without delay.

In Fayetteville, Georgia, one can see that there are numerous warehouses that can support many types of business endeavors. Unfortunately, many of them are currently empty. This is a symptom of the economic stagnation that is dragging America down. Even though shale deposits are not located in this region, the growth and success of the natural gas industry would benefit the various ancillary industries that offer material and financial support to it. In the end, our local and national economies would gain.

I believe that the federal government must stop putting up obstacles to liquefied natural gas exportation. That includes both the Department of Energy and negative thinkers such as Massachusetts Democrat Ed Markey. Taking advantage of our plentiful resource can reduce our dependence on foreign energy. The reasons are compelling and our bright future is awaiting. Please approve liquefied natural gas exportation.

Best,

Christine Felsted
