Secretary Steven Chu
2012 LNG Export Study
U.S. Department of Energy (FE-34)
Office of Natural Gas Regulatory Activities
Office of Fossil Energy
P.O. Box 44375
Washington, DC 20026-4375

Dear Secretary Chu,

There will always be that one person who has to argue, no matter how silly the objections. In spite of what Representative Ed Markey might conjecture, exporting liquefied natural gas (LNG) is a wise choice for our future. Revenue from this export will bring money into our pockets and much-needed jobs back to America. Importing products that we have in our back yard has driven us right into the poorhouse. Let's instead put our resources to work to benefit us.

For forty years, I worked as a mechanic for an energy company. We started small but grew into a force to be reckoned with. We are big into the fracking in Pennsylvania. Just last week, the shares I have in natural gas jumped by three dollars. In light of this success, I am increasingly tired of seeing jobs and resources sent overseas. A few years back, we lost our steel mills. We were building the Lackawanna Bridge in Buffalo. Instead of using steel from the plant right under the bridge, we imported it from China. This makes no sense. We are robbing Peter to pay Paul and it is time to stop. The American people deserve better.

I implore the Department of Energy to authorize the export of LNG. File Congressman Ed Markey's letter of opposition right where it belongs. Our Nation is in trouble and this exportation can start us off on a path to ease the burdens.

Best,

David Miller
