Secretary Steven Chu
2012 LNG Export Study
U.S. Department of Energy (HE-34)
Office of Natural Gas Regulatory Activities
Office of Fossil Energy
P.O. Box 44375
Washington, DC 20026-4375

Dear Secretary Chu,

Natural gas exportation is an issue that is very dear to my wife's and my hearts. We are at the western end of the state where Marcellus Shale is located. Although they recently postponed fracking right near us, we have other successful pads in the area. The way I see it, we need to move ahead with any project that will increase production in the United States. Unlike what top Democratic leader Ed Markey wrote to you, I believe that liquefied natural gas exports will be extremely beneficial to America.

Natural gas production is directly responsible for a huge surge in job creation in the state of Pennsylvania, leading to an influx of new residents and a flood of revenue. After all, the out-of-state people have been buying clothes and groceries, eating at our restaurants and purchasing goods from our small businesses. I have been a radio personality for thirty years and have a home studio where I produce radio and television commercials. My wife and I love this community and would like to see it gain even more benefits from the additional revenue that natural gas exportation would bring about.

Until natural gas came to the region, our manufacturing industries were in a steep decline. I know that it is possible to extract and refine this resource without harming the environment. We have to do everything we can to become energy efficient. There are people whining and crying about green energy. Well, this is it, and now they need to put their money where their mouth is and get behind it. I strongly support liquefied natural gas exports and ask that you do so as well.

Regards,

Greg Call
