Secretary Steven Chu
2012 LNG Export Study
U.S. Department of Energy (FE-34)
Office of Natural Gas Regulatory Activities
Office of Fossil Energy
P.O. Box 44375
Washington, DC 20026-4375

Dear Secretary Chu-

If the Department of Energy allows liquefied natural gas to be exported, it will be a major opportunity for our country that would allow us to boost the economy. This recession has been tough on all businesses, a fact we as entrepreneurs know firsthand. Our business has been down approximately \$100,000 annually. Not only has it been hard on us, but also we had to let some people go. These were individuals who have families. According to the study your agency has completed, new construction jobs will be created by exporting our liquefied natural gas. This would have a positive impact on our business because my husband is an electrical contractor.

Representative Markey should take an unbiased look at the study pertaining to exporting natural gas instead of writing a letter opposing it. Because of his environmentalist agenda, he looks past all the benefits this country would gain by putting people back to work. Not far from where we reside, natural gas operations have brought some sleepy little towns back to life. Jobs have been provided, and numerous smaller businesses have had increased sales. What a boon that would be for companies such as ours if exportation were allowed!

Because this country is blessed with valuable resources, there is not a good reason to lower our security and have our economy and fuel supply manipulated by unstable Middle East nations. Dumping money into their economies instead of retrieving our own resources is counterproductive. Utilizing our resources could make us international competitors once again, bringing healthy free enterprise back to our nation. Please disregard Mr. Markey's groundless objections and move to export liquefied natural gas.

Thank you for your help,

Terry Jetter
