

Secretary Steven Chu
2012 LNG Export Study
U.S. Department of Energy (FE-34)
Office of Natural Gas Regulatory Activities
Office of Fossil Energy
P.O. Box 44375
Washington, DC 20026-4375

Dear Secretary Chu,

Rather than stalling the exportation of liquefied natural gas overseas, I am in favor of seizing this opportunity right away. I think it is narrowminded for Congressman Ed Markey to oppose the action to change the eleven natural gas import facilities to export stations. The state of Utah is proof of the gains in oil and energy, including coal and natural gas.

Our unemployment is only five percent, and we have a government that does not overextended itself. We also use our land to explore energy mines. If LNG export is authorized, our companies would be providers to those bases in places like Mississippi. LNG stations can build an infrastructure of wealth, enough to protect the environment and produce new positions for our residents.

My life is fulfilling with seven children and fourteen grandchildren. I experience love all around me, and I want to share it with everyone, especially with the students where I am a substitute teacher. Family is important and families need jobs. With the economy in mind, I elect to move forward to allow the sale of LNG abroad, first cautiously to make adjustments if problems occur, then aggressively after that. We have more than ample supplies in natural gas and should consider this initiative a priority.

Thank you for your help,

Zina Cox
